ILLINOIS CROP REPORT,

—FOR—

MAY 1, 1891.

Synopsis of the Reports of Correspondents upon the Condition of the Growing
Crops, Etc.

ILLINOIS STATE BOARD OF AGRICULTURE, }
SPRINGFIELD, May 1, 1891.

The information contained in this circular was obtained from the reports of correspondents mailed to this office the first of May.

The correspondents are, as a rule, reputable farmers of extended experience who are deeply interested in the accuracy of the returns made by this Department.

A large number of the correspondents have been reporting to this Department for the past fifteen years and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters. The correspondents number over six hundred, and are so distributed over the State as to represent each locality.

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

WINTER WHEAT.

Notwithstanding the fears expressed during the winter as to the amount of damage done by the Hessian fly, the winter and spring have been so favorable to the growth of wheat that the May 1 condition is far above the average. The condition at this date of no year since 1880 has been so promising for a large yield as at this time, when the average condition for the State is six points above the normal. This, taken in connection with the fact that the unusually large area seeded last fall, 1,834,378 acres, has not been materially

342217

reduced by injury of any kind, either by winter-killing, floods, or Hessian fly, is good ground for encouragement to the farmer of a splendid crop this season.

The area claimed by correspondents to be destroyed by any of the causes mentioned above is but three per cent. of the entire area, a proportion so small that it was not thought necessary to take it into account in giving the area which will probably be harvested.

The condition in the northern division of the State is not quite so promising as in the central and southern divisions, being but three points above an average, but that has been exceeded but once in the ten previous years, in 1882, when the May 1 condition was 105.

In both the central and southern divisions of the State the present condition is 108, a point which has not been reached before at this date for over a decade.

But few complaints of any kind as to the wheat have reached this office, but in Scott county it is claimed that the lower blades on some of the wheat on stubble ground are turning yellow, but it is not yet determined whether it is caused by insects or dry weather. Pope and Clinton counties report the same trouble. Fly is working to a limited extent on the grain in Monroe, Moultrie, Bond, Pike, Tazewell and Fulton counties.

The oats louse is at work on wheat in Monroe and White counties. Bond and Livingston counties report some chinch bug, but neither they, the oats louse, nor the Hessian fly are doing much damage. The most serious danger to be feared is that the growth is so rank that lodging is imminent, and in the counties of White and Bond the wheat has already begun to lodge. In Mason county many farmers are pasturing their wheat, it is growing so rank.

In Massac county wheat is beginning to head

SPRING WHEAT.

The area devoted to spring wheat is 7 per cent. less than the area seeded to this crop in 1890, and the May 1 condition of the crop is 96 per cent.

NORTHERN DIVISION

In this section of the State there is an increase in the area of spring wheat as noted, viz: Bureau, 101 per cent; Cook, 112; DuPage, 103; Kane, 110; Lake, 102.

In Jo Daviess county the area reported as seeded is but half as large as last season.

The May 1 condition is above the average in the counties of Bureau, 101; DuPage, 102; Henry, 105; and Winnebago, 110.

CENTRAL DIVISION.

But five counties in Central Illinois report on spring wheat, the area seeded being 89 per cent. as compared with last season, and the May 1 condition being 99 per cent.

OLD WHEAT.

With the exception of 1885 the wheat crop of 1890 was the smallest produced in Illinois for the past eleven years. The crop of 1890 amounted to but 13,608,504 bushels, and of this amount but 12 per cent., or 1,580,913 bushels, remained in the producers' hands May 1, 1891.

There was not enough wheat raised in Illinois in 1890 for seed and consumption by 2,002,400 bushels.

The following table gives the amount of "old wheat" in first hands the first of May, since and including 1880:

Year Produced.	Crop in bushels.	Per cent. crop on hand following May 1.	Amount crop in producers' hands following May 1.	Surplus wheat above seed and consumption at harvest.	Deficit at harvest.
1880	56,508,309	*15	8,476,246	39,851,883
1881	22,374,163	13	2,924,039	5,765,414
1882	52,323,261	15	8,174,634	36,214,133
1883	20,374,572	15	3,208,358	4,575,152
1884	34,367,493	18	6,350,202	17,387,794
1885	5,299,243	14	1,201,904	5,439,786
1886	28,284,086	15	4,000,931	12,082,999
1887	38,076,486	13	5,034,875	21,942,119
1888	33,916,920	12	4,022,569	17,354,947
1889	37,201,916	15	5,722,594	20,919,433
1890	13,608,504	12	1,580,903	2,002,400
Average	31,121,359	15	4,608,841	19,450,430	3,721,093

*Estimated.

The amount of surplus wheat above seed and consumption given in the above table is determined by deducting at time of harvest from the entire crop of the season, the quantity required to seed an area equal in extent to that harvested, at the rate of $1\frac{1}{2}$ bushels per acre, and provide 4 bushels per capita for consumption during the ensuing twelve months.

RYE.

Most that has been said of winter wheat will also apply to rye, the average condition for the State at this date being three points above the normal. An even smaller area was winter-killed than was the case with wheat, and no material injury has been done by insects.

The area sown last fall was not quite so large as in 1890, but the healthy condition of the plant is promising for a larger yield than last year.

In the northern division of the State the May 1 condition is encouraging for an average or larger yield in all the counties except those named below, where the condition is as noted: Grundy, 96 per cent.; Kendall, 96; LaSalle, 98; Livingston, 92; Marshall 99, and Will, 91 per cent.

In central Illinois the condition is above an average except in Cass county, 90 per cent.; Christian, 97, and Mason, 97.

A comparatively small amount of rye is raised in the southern division of the State, but the condition is up to an average except as noted: Massac, Monroe and Wabash counties, 90 per cent.; Randolph, 98. In Fayette county the rye is beginning to head.

OATS.

The area seeded to oats this spring is smaller than for many years past. This is attributable to two or three causes. The spring rains came just at seeding time, and delayed it until so late that many farmers put in corn instead of oats. Again, the small crop last year so increased the price of seed oats, and they were so scarce that many were deterred from planting them on that account.

The area seeded this spring is 15 per cent. smaller than in 1890, and the May 1 condition is but 90 per cent.

CROP REPORT.

NORTHERN DIVISION.

In northern Illinois alone is the area seeded larger than last year, and that by but one point. The largest area reported was in Whiteside county, where there is an increase of 13 per cent. over 1890. In Henderson county the area is 13 per cent. less than in 1890, these counties being the extremes.

The condition of the crop on May 1 is 92 per cent., but two counties being up to an average, viz: Henderson and Whiteside. The lowest condition reported is 80 per cent. in Iroquois county.

CENTRAL DIVISION.

But three counties in this division report as large an area in oats as last year, viz: Champaign and Ford, 100 per cent., and Menard 101. The area for the entire division is 87 per cent., and the May 1 condition 94.

The oats louse is reported in Christian county.

SOUTHERN DIVISION.

But little more than two-thirds of the area of 1890 was seeded to oats in this section of the State this spring. This is the portion of the State which suffered so severely from the ravages of the grain plant louse last year, and probably a fear of it this season was one of the factors in reducing the area.

In Pulaski county the area is reported as 2 points above 1890, the next largest area being 95 per cent. in Bond and Gallatin counties. In Pope county but one-fourth as large an area was seeded as in 1890.

The May 1 condition in this division is but 84 per cent. Two counties, Jackson and Massac, are in better condition than usual at this date, and Pulaski is an average condition. The most discouraging outlook is in Monroe county, where the May 1 condition is but 57 per cent. of an average.

BARLEY.

Of the twenty-four counties from which reports on barley have been received, one is in the southern division of the State, two in the central, and the remaining twenty-one in the northern division.

The area is seven per cent. less than in 1890, and the May 1 condition is but 94 per cent. of an average.

OLD CORN.

But once during the past twelve years has the amount of corn remaining in producers' hands May 1 been so small as at the present time. Not only was the crop of 1890 much below the average, but the proportion unsold was unusually small, only one-fifth of the entire crop, so that the quantity remaining in first hands is but 32,653,868 bushels.

The following table gives the amount of "old corn" in the producers' hands May 1, the past twelve years, as well as the extent of the crop produced each preceding year.

Year Produced.	Crop in bushels.	Per ct. corn on hand fol- lowing May.	Bushels corn in produc- ers' hands following May
1879	305,913,377	32+	99,229,889
1880	250,697,036	28+	71,929,343
1881	174,491,706	21+	37,445,964
1882	179,471,729	24+	43,450,857
1883	186,553,558	21+	39,478,621
1884	207,556,662	24+	50,102,264
1885	230,922,298	24+	57,047,027
1886	182,755,053	24+	43,346,028
1887	129,537,600	18+	23,573,279
1888	277,726,451	33+	92,584,238
1889	247,980,589	36	90,503,175
1890	164,512,020	20	32,653,868
Average	211,512,340	27	56,778,713

MEADOWS.

The area in meadows this season is one per cent. less than in 1890. In northern Illinois it is 3 per cent. smaller; in the central division of the State 5 per cent. less, and in southern Illinois there is an increase of 4 per cent.

The reduced area is owing in part to the high price of grain last year, which induced many farmers to put part of their grass lands into grain.

The average condition of meadows is one point above a seasonable average. In the northern division it is 100 per cent.; in the central, 101, and in the southern, 102.

The mild winter was favorable to the growth of meadows, and as a rule they are from one to two weeks further advanced than is usual at this date.

In Pope county grass is turning yellow, on account of dry weather, and in Putnam a white or gray worm bores out the bulb, and old timothy stands are almost killed in some places.

Clover and timothy are the principal meadow grasses in this State, with some red top in the southern division. In Crawford county more clover has been sown this season than for some years past.

PASTURES.

Pastures occupy two per cent. less area than a year ago. In the northern and southern divisions of the State the area is 99 per cent. as compared with 1890, while in central Illinois it is only 97 per cent.

What has been said as to the decrease in the area of meadows is equally applicable to pastures, the high price of grain last year being the principal reason for it.

Pastures generally are in fine condition, being one point above a seasonable average.

The scarcity of grain in some portions of the State necessitated turning stock on pastures before they got a fair start, and in those sections they are not quite so good as might be expected, but as a rule they are unexceptionable.

LIVE STOCK.

HORSES.

The number of horses in the State has not changed materially during the past year. While there is a slight decrease in number in some counties, it is offset by an increase in others, so the number is about the same.

The condition of horses at this date is rather below a seasonable average, being 96 per cent. in northern Illinois, 97 in central, and 95 in southern Illinois.

There are reports of disease among horses in a number of counties, but the most influential factor in producing this low condition was the scarcity of food the past winter, which had the effect of bringing all farm animals to the warm weather rather thin in flesh, even where no disease exists.

Distemper is reported to a greater or less extent in the counties of Marshall, Bond, Henderson, DeKalb, Pike, Wayne, DuPage, Livingston, Calhoun, Tazewell, Ford, Marion, Edgar, Macon and Fulton.

In Randolph county a good many horses have died from various causes, but there has been no prevailing disease.

In Whiteside and Knox counties a good many mares are losing their colts.

There is some epizootic among horses in Montgomery, glanders in Bond, and pink-eye in Jefferson counties. There have been some cases of lock jaw and blind staggers in horses in Johnson county.

MULES.

The number of mules in the State is not quite so large as last year.

Their condition generally is good, there being no complaint of disease among them, but they, like all other live stock, are thin in flesh.

CATTLE.

There is a deficiency of ten per cent. in the number of cattle on hand this year, as compared with last. There has been a steady decrease in the number of cattle kept in this State since 1886, partly due, no doubt, to the low prices which were obtained for them.

Cattle generally are thin in flesh, and not very strong, but there is no complaint of disease among them.

DAIRY COWS.

The above remarks will apply equally to dairy cows, which are rather below the average in both number and condition.

In Whiteside county a good many cows have lost their calves.

HOGS.

There is but little more than three-fourths as many hogs in the State now as on May 1, 1890. The decrease is about equally divided between the three grand divisions of the State, being 78, 77 and 79 per cent., respectively.

Their condition is unusually poor, as they have suffered extensively from cholera. The only counties in the State where hogs are in a seasonable condition are McDonough, Moultrie and Piatt counties in the central division, and Jackson and Massac in the southern.

Hog cholera has prevailed, sometimes generally, and sometimes in isolated localities, in the counties of Saline, Knox, Sangamon, Jefferson, Wabash, Franklin, Pike, Massac,

Wayne, Ogle, Greene, Calhoun, McLean, Morgan, Vermilion, White, Williamson, Winnebago, Douglas, Fulton, Clay and Randolph.

There has been some loss of young pigs in Henderson, Menard, Tazewell and Fulton counties.

SHEEP.

Sheep are nearly up to an average in both number and condition, and are, on the whole, rather more promising than other varieties of farm stock. In both northern and central Illinois the number is reported as great as last year, while in southern Illinois there is four per cent. less.

The condition is quite as good as usual at this season in the central division, though there is a falling off of two points in both the northern and southern divisions.

In Fayette county more attention than heretofore is being paid to sheep.

The only complaint of disease in sheep is in Douglas county, where some scab is reported.

BEEES.

Crop Production.

Bees as a rule have not done well the past winter, although some counties report them in prime condition.

They were unable to lay in as large a supply of honey in the fall as usual, and during the warm weather many hives consumed their whole store, and afterwards starved.

This state of affairs is reported from the counties of Knox, Marshall, Moultrie, Shelby, Peoria, White, Edwards, Champaign, Crawford, Henderson, Mercer, Tazewell and Douglas.

SPRING WORK.

Fully fifteen per cent. less work has been done this year than is usual by this date.

The soil is unusually hard to work, and in some sections farmers have been obliged to postpone plowing and planting until it rains.

Lack of freezing during the winter is the generally ascribed reason for this state of the ground.

In the following counties the soil generally is in good condition, viz: Sangamon, Pike, Shelby, Jackson, Greene, Kankakee, Wabash, Franklin, Coles and Woodford (where tiled), Whiteside, Schuyler, Morgan and Macoupin. In most of the other counties in the State the ground is either very hard and cloddy, or soggy. In Winnebago county it is said to be the hardest season to put in crops for years.

IMPROVED METHODS.

Farmers in many sections of the State are getting out of the ruts in which they have traveled so long, onto the higher ground, and though the way may still be rough, the outlook is brighter and more extended.

The correspondents of this Department note, as straws pointing in this direction, that changes are being made in the manner of feeding. This is noted in Fayette county, and also in Greene, Lee and Macoupin. In the three latter counties many farmers are crushing ear corn instead of shelling or feeding it whole.

A good many silos were built in Kendall county last year, and more will be built this year.

Some of the most progressive farmers in Greene county are dehorning their cattle as a matter of economy.

FRUIT.

Rarely, if ever, has there been a more promising outlook for fruit at this time, than the present season. With the exception of apples, all the larger fruits have bloomed very heavily, and should there be no late frosts, nor other untoward events, the fruit crop of Illinois will be the largest ever known.

The bloom on apples has been very light in the following counties, in many of which there was not over half the usual amount: Scott, Calhoun, Menard, Montgomery, Logan and Macon.

An insect is working on the grape buds in Ogle county.

In Massac county the peaches were injured somewhat by a late cold snap.

In Jefferson county there is a tendency to change from grain to fruit raising, strawberries and orchards being the principal varieties planted so far.

In Union county more attention is being paid to market-gardening and fruit-raising. The area of strawberries and other small fruits has been increased 10 per cent., while that of gardens has increased at least 20 per cent.

WAGES PAID FARM HANDS.

The supply of farm hands is not equal to the demand in the majority of the counties in the State.

Wages range about the same as last year, there being only very slight changes.

As compared with 1890 the wages paid farm hands this season are as follows: Per day with board, 1890, \$0.78; 1891, \$0.83. Per day without board, 1890, \$1.08; 1891, \$1.12. Per month with board, 1890, \$16.80; 1891, \$17.47. Per month without board, 1890, \$23.38; 1891, \$24.22.

The average wages paid farm hands during the past twelve years in the three grand divisions of the State, are given in the following table:

DIVISION.	PER DAY.		PER MONTH.	
	With board.	Without board.	With board.	Without board.
Northern.....	\$0 99	\$1 28	\$19 56	\$27 47
Central.....	85	1 12	17 79	24 67
Southern.....	66	92	14 52	20 89
Average.....	\$0 83	\$1 11	\$17 29	\$24 3

The wages paid farm help in the three divisions of the State, during the past twelve years, is given in the following tables:

NORTHERN DIVISION.

YEAR.	PER DAY.		PER MONTH.	
	With board.	Without board.	With board	Without board.
1880.....	\$0 94	\$1 15	\$17 55	\$25 25

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their prompt and seasonable appearance during the growing season, and immediately after harvest, when the information as to condition and yield is most needed to enable the producer and the public to decide as to the extent of the supply and the market value of the crop. The official acreage of the crops, as reported by assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested crop. In reporting condition, 100 is used by correspondents to represent a fair seasonable average vitality or growth of crops, unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent, is recorded 110; a decrease of five per cent. is marked 95, etc. The observers of the Department are, as a rule, experienced farmers who have made the study of the condition and yield of crops their life work; conservative men who realize the necessity for the work done by this Department and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates, for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary.

ILLINOIS CROP REPORT,

—FOR—

JUNE 20, 1891.

Synopsis of the Reports of Correspondents upon the Condition of the Growing
Crops, Etc.

ILLINOIS STATE BOARD OF AGRICULTURE, }
SPRINGFIELD, June 20, 1891. }

The information contained in this circular was obtained from the reports of correspondents mailed to this office the twentieth of June.

The correspondents are, as a rule, reputable farmers of extended experience who are deeply interested in the accuracy of the returns made by this Department.

A large number of the correspondents have been reporting to this Department for the past fifteen years and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters. The correspondents number over five hundred, and are so distributed over the State as to represent each locality.

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

CORN.

The reports of correspondents of this date indicate that the area devoted to corn this season is one point larger than last year, when there was 6,114,226 acres in this great staple. In the northern division the area is about the same as last season, while there is an increase of two points in both the central and southern divisions. The June 20 condition is encouraging for 93 per cent. of an average yield per acre, but should we be favored with a late fall, and no destructive storms or insects, there will probably be a full average yield per acre. Corn is, as a rule, from one to two weeks later than usual, which makes the condition low, and the stand is quite uneven in some localities, owing to insects and dry weather in May, but it is generally healthy, and if given time to mature will overcome the present low con-

dition. Corn has not been exempt from the depredations of insects, of which there seems to be an unusually large number and variety this season. In the counties of Bond, Douglas, Greene, Jo Daviess, DuPage, Kendall and Montgomery, cut-worms injured corn badly, especially that on sod ground, and much had to be re-planted. In Calhoun and Piatt counties ants disturbed the corn when young, and wire or web-worms are reported from the counties of Douglas, Piatt and Edwards. Gophers in Kendall county, and insects generally in Adams and Brown counties have done some damage. In Bond county some corn was drowned out on low ground.

NORTHERN DIVISION.

There is no increase in the area of corn in this division, as compared with 1890. The condition of the crop at this date is better than in either of the other divisions, being but 5 points below a seasonable average. The quality of the seed is excellent, but one county reporting it poorer than usual. In Henderson county the first corn made its appearance above ground April 28, but in most of the counties in this division it did not appear before May 1, and from that on to the 20th.

CENTRAL DIVISION.

The area in corn this season is 2 points above that of last year. The present condition is 7 points below a seasonable average, but with favorable weather this condition will doubtless improve. In Edgar county the condition is but 70 per cent., and in Brown and Coles counties 75 per cent. of an average. The seed used was of superior quality in this as well as the northern division. The first appearance of corn in this section was on April 15, in Mason county.

SOUTHERN DIVISION.

An increase in area of 2 points is noted in this division over that of 1890, and the condition is 94 per cent. of a seasonable average. The seed used in this division of the State was not nearly so good as in northern and central Illinois. In the counties of Alexander, Lawrence and Saline corn was visible above ground April 10.

BROOM CORN.

The reports of our correspondents indicate that the limited area usually devoted to broom corn has been quite materially reduced this season, particularly in the counties of Coles, Douglas and Piatt, the leading broom corn counties in the State. The area for the State, as compared with last year, is but 90 per cent., and the June 20 condition 88 per cent., as compared with an average.

SORGHUM.

There is a smaller area in sorghum this season than for ten years past, according to the reports of correspondents. As compared with 1890 the area is but 95 per cent. The June 20 condition is favorable for 95 per cent. of an average yield per acre.

WINTER WHEAT.

The June 20 condition of winter wheat is 4 points lower than on May 1, when the reports indicated 6 per cent. more than an average yield per acre, while correspondents now think but 102 per cent. of an average yield per acre will be realized. This is 27 per cent. better than the condition at this date last year, and taken in connection with the increased area, the wheat crop of the State promises to be much larger than in 1890.

Reports of the oats louse in the wheat have been received from the counties of Knox, Adams, Calhoun, Champaign, Christian, Piatt, Saline, White, Macoupin, McLean, Morgan, Schuyler, Tazewell and Bond, and the Hessian fly has injured the wheat in Schuyler, Moultrie, Peoria, Fulton, Tazewell, Sangamon, Fayette and Knox counties.

As there was some doubt in the minds of many as to whether this was the same insect which was so destructive to oats last season, inquiries were made of Prof. Forbes, who writes us:

"The green louse on the wheat is doubtless one, or both, of the two species which have infested wheat and oats for the last two years; probably the common grain louse, as that is much the more abundant. The other is more properly known as the wheat louse, but appears, like the grain louse, in both oats and wheat.

"Our observations so far have not indicated any serious damage to the grains by these lice this season, the weather having been fairly favorable. These are, however, very uncertain insects, and it will not do to make positive predictions concerning them. I do not myself think that we shall have any very serious trouble with them from this forward."

Two counties, Sangamon and Franklin, report chinch-bugs in the winter wheat, but they do not seem to have done much damage. In parts of Piatt county a new insect pest is in the wheat. It bores into the stem, and fills the hollow with brown eggs which are hard, and about the size of lettuce seed. The stalk falls down and dies.

In Henderson county there is a great deal of cheat in the wheat. This is the only county in which mention is made of cheat this season.

Rust and smut are quite prevalent, one or both being reported from the counties of Pope, Saline, Henderson, Fulton, Monroe, Pulaski and White.

While the dry weather retarded the growth of wheat in many sections of the State, so that it is heading out very short, in other places it has grown so rank that it has lodged, making it difficult, and in some places almost impossible, to harvest it. Lodging is reported from the counties of Woodford, Calhoun, Fayette, Madison, Kendall and White.

In the southern division of the State winter wheat is about all harvested, and also in part of the central division; and while it is impossible to form an estimate at present as to the yield per acre, a fair average is expected. The berry is round and plump, but one or two counties report only two grains abreast instead of three, as is usual.

NORTHERN DIVISION.

While there has been marked improvement in the condition in some counties since May 1, there has been a falling off in others, so that the condition for the division is 4 points less than at that date. The June 20 condition of winter wheat in this section is favorable for nearly a full average yield per acre—99 per cent. The area is estimated as 16 per cent. larger than in 1890.

CENTRAL DIVISION.

As compared with last year, the area devoted to winter wheat in central Illinois this season is 105 per cent. The condition is not so good as it was six weeks ago, but a full average yield per acre is anticipated.

SOUTHERN DIVISION.

In the southern division, the great "wheat belt" of the State, the area is 9 per cent. larger than last year, and with a condition 6 points above the average the wheat crop of this section will be unusually large. Harvest in southern Illinois is about over, but no threshing has been done, so the yield per acre can not be given.

SPRING WHEAT.

Spring wheat has improved somewhat in the northern division of the State since May 1, and is now but 2 points below an average, while in central Illinois the June 20 condition is 3

points below that of May 1. Spring wheat has not been troubled with so many enemies as winter wheat, but chinch-bugs are reported as injuring the spring wheat in Livingston and Stephenson counties.

OATS.

While the late reports do not indicate a very large yield of oats, and they are not so good as on May 1, by 7 points, there is nevertheless a fair prospect for 83 per cent. of an average yield per acre. There are comparatively few counties in the State which do not report the presence of the oats louse, and usually in great number, though their depredations have not been so severe as last season.

In counties where there was very little rain until the last few weeks oats are heading out very short, but in the few counties following, where there has been an abundance of rain, they have grown very rank, and lodged so that they will be difficult to cut: Henry, Knox, Rock Island, DeKalb and Fulton counties.

In Livingston county oats have been injured somewhat by chinch-bugs.

NORTHERN DIVISION.

In this portion of the State the condition of oats is 2 points better than on May 1, being now 94 per cent. of a seasonable average. The present condition promises an average, or better, yield per acre in the counties of Boone, Bureau, Carroll, Cook, Lake, Lee, McHenry, Mercer, Peoria, Stark and Winnebago. The most discouraging outlook in northern Illinois is in Grundy county, where the June 20 condition is favorable for only 65 per cent. of an average yield per acre.

CENTRAL DIVISION.

The weather has not been so favorable for the growth of oats in central as in northern Illinois during the past six weeks, and they have dropped 11 points in that time. In but three counties—Adams, Ford and Montgomery—may an average yield per acre be expected. In Scott county the present condition indicates but half an average yield per acre, while the division as a whole will return to the farmer but 83 per cent. of an average yield per acre, should the present conditions continue.

SOUTHERN DIVISION.

But three-fourths of an average yield of oats per acre may be expected in southern Illinois. Four counties—Clinton, Franklin, Jackson and Pulaski—promise an average, or better, yield per acre, but in the majority of counties in this division less than three-fourths of an average yield per acre is anticipated. In Wabash county the June 20 condition is favorable for but 25 per cent. of an average yield per acre.

RYE.

The condition of rye has improved very materially since May 1, and it is now thought the yield per acre will be a good average. In the northern division of the State 97 per cent. of an average yield per acre is anticipated, in the central division 99 per cent., and in the southern division 102 per cent.

No insect enemies are reported as damaging rye, which is rather remarkable, considering their prevalence this season. In a table published elsewhere in this report the June 20 condition of rye in each county of the State is given.

BARLEY.

In the northern division of the State, where more than nine-tenths of the barley raised in this State is grown, the 1891 acreage is 8 per cent. less than in 1890, while in the two counties in central Illinois reporting on this crop there is an increase in area over last year of 5 per cent. No report on this crop has been received from the southern division of the State. The June 20 condition in northern Illinois is favorable for 96 per cent. of an average yield per acre, and for 95 per cent. in the central division.

MEADOWS.

The most favorable condition of meadows at this date is in the northern division of the State, where 90 per cent. of an average yield per acre is anticipated. In central Illinois but 79 per cent. of an average yield per acre is expected, and the southern division 87 per cent. In St. Clair county army worms are doing a good deal of damage in new meadows. In Kankakee county new meadows are a failure, and old ones poor, and in Lee county, meadows are badly lodged.

PASTURES.

The dry weather in May was very detrimental to the growth of pastures which had already been closely cropped, and the June 20 condition is poorer than on corresponding date for two years past.

In the northern division they are but one point below a seasonable average, and in the southern but 6, but in central Illinois the condition is 13 points off. The May 1 condition of pastures in this division was two points above an average, so there has been a decrease of 15 points in the past six weeks.

IRISH POTATOES.

The area devoted to Irish potatoes this season is nearly as large as in 1890, and the June 20 condition is encouraging for 98 per cent. of an average yield per acre. In the northern division of the State a full average yield per acre is expected; 96 per cent. of an average in the central division, and 99 per cent. in the southern division.

One correspondent in Clinton county reports that potatoes have so run to top that they look as though there would not be over half a crop, but the other correspondents do not mention it.

The most discouraging reports come from Douglas and Moultrie counties, where the June 20 condition is favorable for only 67 and 68 per cent. of an average yield per acre respectively.

SWEET POTATOES.

The area devoted to sweet potatoes this season is 3 per cent. less than in 1890, when there was 2,492 acres in this crop. As compared with last year the area in the northern division is 98 per cent.; in the central division 97, and in the southern division 95 per cent.

The June 20 condition is encouraging for 94 per cent. of an average yield per acre, the northern and southern divisions reporting a condition of 95 per cent. each, and the central division 93 per cent.

FLAX.

The flax area is reduced 9 points this season from that of 1890, and the condition of the crop at this date is encouraging for but 93 per cent. of an average yield per acre.

CLOVER.

The clover area is not so large as last season by 5 points, and the condition is favorable for but 94 per cent. of an average yield per acre.

The largest area, and the best condition are reported from southern Illinois, both being 97 per cent. In St. Clair county the recent rains have almost ruined the red clover crop, which is quite large.

HUNGARIAN AND MILLET.

The area in these crops this season as compared with last is 95 per cent. in northern Illinois, 91 per cent. in the central and 88 per cent. in the southern division.

There is an increased area in the counties named below; DeKalb county, 110 per cent.; Winnebago, 120; Woodford, 110, and Effingham, 105.

TOBACCO.

In a few counties in the State there is an increased area in tobacco this season, but in the southern division, which contained over half the area devoted to this crop in 1890, there is a decrease of 11 per cent. in the acreage.

The June 20 condition of the crop is favorable for 96 per cent. of an average yield per acre.

FIELD BEANS.

The area in field beans this year is 4 per cent. less than in 1890, and the present condition indicates 96 per cent. of an average yield per acre.

FIELD PEAS.

While the area in this crop is not quite so large in the northern and central divisions of the State as in 1890, the tendency in southern Illinois is to an increased area. But one county in this division, Washington, reports a smaller area than last year, and others report an increased area of from 5 to 20 per cent.

FRUITS.

The yield of small fruit this season is nearly up to an average, and when the increased acreage is taken into consideration, the small fruit crop will probably be the largest ever raised in the State. Fruit was injured by late frosts in Franklin county.

There will not be over half a crop of apples in Illinois this year, the counties reporting an average yield being the exception. In Jefferson county the winter apples fell off when they were as quails' eggs and in Clay, Franklin, Peoria and Pope counties apples are falling badly.

In Clinton county the apple, peach and pear trees are creaking down with their load of fruit.

Peaches are falling off in Peoria county, and plums in Union. In Warren county the curculio and lice are injuring plums, and spraying does no good.

The small fruit which is now ripening in Calhoun county is bursting and rotting.

In Williamson county fruits were considerably damaged by frost, and in Pulaski county the rains have caused peaches to rot. In Marshall county a small insect is injuring the fruit.

CHERRIES.

More cherries were raised in Illinois this year than for many years past.

In northern Illinois the yield was 6 per cent. larger than usual; in central Illinois 10 per cent more; and in southern Illinois 2 per cent. less than an average.

STRAWBERRIES.

Strawberries and other small fruits were injured by late frosts in Bureau, Kankakee and Kendall counties. In the northern and central divisions of the State the yield was 7 per cent. less than an average, but in southern Illinois the yield was as large as usual.

RASPBERRIES.

No special injury of any kind has been reported to this fruit, and the yield was 97 per cent. of an average.

GOOSEBERRIES.

This fruit was injured by worms in Clark, Clinton and Coles counties. They eat the leaves off, and the berries fall.

The average yield for the State was 93 per cent.

CURRANTS,

The same worm which injured the gooseberries has been at work on the currants. Their presence is reported in Coles county. The yield of currants was not quite so good as gooseberries, being but 91 per cent. The largest yield was in the central division of the State.

VINEYARDS.

The area in vineyards is quite as large as in 1890, some counties reporting a largely increased area.

Grapes were badly injured by the late frosts in Jefferson county, and also in Fayette and Bureau counties, and the rains have caused them to rot in Pulaski county.

The June 20 condition in the northern division of the State is for 93 per cent. of an average yield; 89 per cent. in the central and 90 per cent. in the southern division.

YOUNG LIVE STOCK.

PIGS.

The number of young pigs this spring is unusually small, but six counties reporting as many as usual, and only three an increased number.

While there is no report of disease among live stock of any kind, their condition is not quite up to a seasonable average. In the northern division pigs are 8 per cent. below an average, in the central 5 per cent. and in the southern 12 per cent.

LAMBS.

The number of spring lambs is 8 per cent. below an average in northern Illinois and one below in the central portion of the State, while in southern Illinois, where more attention is being paid to sheep raising, there is a full average.

The June 20 condition is a seasonable average in both the central and southern divisions of the State, but is 7 per cent. off in northern Illinois.

CALVES.

Only 93 per cent. of the usual number of calves are reported this spring, being 95, 93 and 97 per cent. in the northern, central and southern divisions of the State respectively.

Their condition is nearly a seasonable average.

COLTS.

Not quite so many colts as usual are reported from northern Illinois, but the number is as large as usual in the central, and 1 per cent. larger than usual in the southern division. Their condition is nearly normal.

Reports of correspondents indicate that the value of colts at weaning time is less in the northern than in either of the other divisions of the State, being \$38 in the northern, \$41 in the central, and \$40 in the southern division.

The per cent. lost prior to weaning is 8 in the northern division, 6 in the central, and 5 in the southern division.

The cost of service of stallions is about the same the State over, being \$12 in both the northern and central divisions, and \$10 in the southern.

GENERAL REMARKS.

The season has varied so this year in different parts of the State that it is difficult to make a statement in regard to condition of the soil, etc., but a few correspondents have stated its condition in their localities, which may be summarized as follows: In Bureau county the soil is in excellent condition for working; in DeKalb the ground is very wet, and weeds are getting a good start; in Jefferson county the soil seems too light for the best growth of corn; in DuPage the land is too wet to work.

Considerable tiling has been done this season in the counties of McDonough, Stark, Calhoun, Clark, Iroquois, Stephenson and Will—where more attention has been given to tiling than for ten years past—Fulton, Johnson and Livingston.

Special attention is being paid to improved stock in the following counties: Kane, Marshall, Putnam, Rock Island and Iroquois. Cattle are mostly deborned in Tazewell county, and in Fayette county particular attention is paid to improving the breeds of sheep.

A great deal of attention is given to improved breeds of horses in Jefferson county, and also in Calhoun, the latter county preferring roadsters to other breeds. Improved breeds of both cattle and horses claim the attention of McDonough county stock raisers.

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their prompt and seasonable appearance during the growing season, and immediately after harvest when the information as to condition and yield is most needed to enable the producer and the public to decide as to the extent of the supply and the market value of the crop. The official acreage of the crops, as reported by assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested

crop. In reporting condition, 100 is used by correspondents to represent a fair seasonable average vitality or growth unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent, is recorded 110; a decrease of five per cent. is marked 95, etc. The correspondents of the Department are, as a rule, experienced farmers who have made the study of the condition and yield of crops their life work; conservative men who realize the necessity for the work done by this Department and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates, for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary.

ILLINOIS CROP REPORT,

—FOR—

AUGUST 1, 1891.

Synopsis of the Reports of Correspondents upon the Condition of the Growing
Crops, Etc.

ILLINOIS STATE BOARD OF AGRICULTURE, }
SPRINGFIELD, August 1, 1891.

The information contained in this circular was obtained from the reports of correspondents mailed to this office the first of August.

The correspondents are, as a rule, reputable farmers of extended experience who are deeply interested in the accuracy of the returns made by this Department.

A large number of the correspondents have been reporting to this Department for the past fifteen years and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters. The correspondents number over six hundred, and are so distributed over the State as to represent each locality.

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

It is greatly to be regretted that the assessors have found so much difficulty in obtaining the reports of agricultural statistics this season, some of the county clerks stating that no returns have been sent to them, and in other counties the reports are so meagre that it seems almost a farce to use them as a basis to estimate the yield of the crops, but as it was

necessary to have some starting point, we have used the figures returned by county clerks with a foot note stating that they are incomplete.

It is to be observed that the majority of the counties from which no returns, or incomplete ones, have been received, are in the southern portion of the State, although the central grand division does not make so good a showing as is desired.

It is surprising that so intelligent a body of men as the farmers of Illinois should continue to hold such erroneous ideas of the use to which the crop reports are put. We reiterate what we have said before in regard to the speculators and boards of trade men having their own agents on the road throughout the growing season, from whose reports they make up their schedules of prices.

It is to be hoped that another season the assessors will be able to make full returns of agricultreual statistics, that Illinois may take the place to which she is entitled as one of the greatest agricultural states in the Union.

SEASON.

The temperature of the month of June was 1.5° above the normal for the past sixteen years, while that of July, when we look for our hottest weather, was 5.2° below the normal for the same period.

The precipitation in June was 0.61 inches below the normal for the past thirteen years, while that of July was 1.21 inches short for the same period.

Notwithstanding these apparently abnormal meteorological conditions the outlook for the farmers of Illinois on the first of August has rarely been more promising, and there is great cause for congratulation on this state of affairs.

WHEAT.

While the area devoted to wheat this season is not so large as in some years past, there is an increase over the area of 1890 of nearly 54 per cent. The area injured by Hessian fly, which caused so much alarm during the winter, was so small as not to be taken into consideration, so that the area harvested, 1,871,968 acres, is the same as that sown.

The average yield of 18 bushels per acre, has rarely been exceeded in the State.

The total yield of wheat this year, both spring and winter, is 34,620,828 bushels.

The quality of the wheat is generally good.

While the price obtained, 79 cents per bushel, is not quite so high as in 1890, the price is above the average for the past ten years, and if sold at the prices current on August 1 will return to the producers \$27,269,219.

CROP REPORT.

5

The following table gives the area, yield and value of the wheat crop of the State during the last thirty-two years:

WHEAT—(Spring and Winter.)

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	Cost of production per acre.	Total cost of production.	Profit.	Loss.

+1860—1881 estimated same as reported for 1880.

WINTER WHEAT.

The area devoted to winter wheat was 1,807,228 acres.

The average yield per acre was 18 bushels, there being 22 bushels in the northern division, 19 in the central and 18 bushels in the southern division.

The largest yield reported was 32 bushels per acre in Kane and Lee counties, and the smallest 12 bushels per acre in the counties of Jefferson, Perry and Pope.

A table published elsewhere in this report gives the area, yield and value of winter wheat in each county in the State.

SPRING WHEAT.

There is a considerable decrease in the area of spring wheat this year as compared with 1890, there being but 64,740 acres against 89,373 last year.

The average yield per acre is 16 bushels, there being 17 bushels per acre produced in the northern division and 15 bushels in both the central and southern divisions

A table published elsewhere in this report gives the area, yield and value of the spring wheat crop in each county in the State.

OATS.

The area in oats this season, 2,934,887 acres, is the smallest area devoted to this crop since 1884. A larger area was sown in the northern division this year than last, but in both the central and southern divisions the area is smaller than in 1890. But the greatest difference is noticeable in the southern division where the area is but 67 per cent. as compared with 1890.

The average yield per acre was 38 bushels, the northern division producing 40 bushels per acre, the central 41, and the southern but 22 bushels. The county reporting the largest yield was Putnam, with an average yield of 54 bushels an acre, while Richland county gives the smallest average, 11 bushels per acre.

The total yield is 113,201,389 bushels, an increase of 37,296,448 bushels over last year.

The price per bushel, 28 cents, is not quite so large as last year, but the increased yield makes the total value of the crop over \$10,000,000 greater than in 1890, and leaves a very fair profit in the hands of the producer.

The following table gives the area, yield and value of the oat crop of the State during the past thirty-two years:

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel—cents.	Total value.	Value per acre.	*Cost of production per acre	Total cost of production.	Profit.	Loss
1860.....	543,572	28	15,220,029	\$0 26	\$3,957,207	\$7 28	\$9 40	\$5,199,577	\$1,152,370

*1860-1881 estimated same as reported for 1881.

RYE.

There is a slight increase in the area devoted to rye this season over 1890, the 1891 area being 180,348 acres.

In the northern division of the State the average yield per acre was 24 bushels, in the central 19, and in the southern 16 bushels. The total yield was 4,160,860 bushels, which is larger than the yield of either of the two previous years.

The ruling price August 1 of 61 cents per bushel has not been equalled since 1882, nor has the total value of the crop been so great since that year. At this price the rye crop will return to the producers \$2,541,905.

The following table gives the area, yield and value of the past thirty-two rye crops grown in the State:

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	*Cost of production per acre	Total cost of production.	Profit.	Loss.

+1860-1881 estimated same as reported for 1880.

A table published elsewhere in this report gives the area, yield and value of rye in each county in the State.

BARLEY.

The 1891 area of barley, 26,375 acres is the smallest area sown to this crop in twelve years, and the average yield per acre, 25 bushels, while slightly larger than the yield of 1890, is still below the average yield for a term of years.

The total yield, 666,472 bushels, is smaller than for any year since 1879.

The price obtained, 49 cents per bushel, is a little above the average of a few years past and at this price the crop is worth to the farmer \$329,220.

The following table gives the area, yield and value of the past thirty-two barley crops produced in this State:

Year.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	+Cost of production per acre.	Total cost of production.	Profit.	Loss.

+1860-1881 estimated same as reported for 1880.

In a table published elsewhere in this report will be found the area, yield and value of the barley crop of the State by counties.

HAY.

There is a somewhat smaller area devoted to hay this season than last, there being but 2,564,294 acres of meadows reported

The weather at the time of hay harvest was very fine, and the crop was gotten in in good shape. While the yield is not quite so heavy as on some years, the quality is excellent.

In a few counties in the State the yield of hay was as high as two tons per acre, but the average yield per acre was 1.40 tons, making a total yield of 3,609,732 tons

Owing to the short pastures the price of hay has advanced and is now higher than on August 1 of either of the past two years. At the ruling price at this date, \$6.70 per ton, hay will return to the producer the sum of \$24,202,232.

The following table gives the area, yield and value of the past thirty-two hay crops of the State:

Year.	Number of acres.	Average yield per acre--tons.	Tons produced.	Price per ton	Total value.	Value per acre	+Cost of production per acre.	Total cost of production.	Profit.	Loss.

†1860-1881 estimated same as reported for 1880.

The area, yield and value of the hay crop of 1891 for each county in the State is given in a table published elsewhere in this report.

FLAX SEED.

Less than half as large an area was devoted to flax seed this year as in 1890, the total area being but 4,294 acres.

The average yield per acre was 9 bushels, and the total yield 39,296 bushels.

The market price August 1 was but \$1.05 per bushel, and the total value \$40,611.

The following table gives the area, yield and value of the last thirteen crop of flax grown in the State:

Year.	Number of acres.	Average yield per acre—bushels	Bushels produced.	Price per bushel.	Total value.	Value per acre.	Cost of production per acre.	Total cost of production.	Profit.	Loss.
1879.	110,016	9 00	990,437	\$1 30	\$1,296,753	\$11 78
1880.	171,985	9 06	1,557,898	1 00	1,579,634	9 19	\$9 45	\$1,565,715	\$13,919

1891.	4,294	9 00	39,296	1 05	40,611	9 45	9 10	38,699	1,912

A table published elsewhere in this report gives the area, yield and value of flax seed in each county in which it is raised.

CORN.

The cool weather of July has not been favorable to the growth of corn, as is evidenced in the lower condition August 1 than on June 20. The June 20 condition was 94 per cent., while that of August 1 is but 83.

The August 1 condition in the northern division of the State is 87 per cent. as against 95 on June 20; in the central it is 87 as compared with 93 June 20, while in the southern division there has been a falling off of 18 points, the June 20 condition being 94 per cent., while that of August 1 is but 76 per cent.

The drought of July was much more severe in this portion of the State than further north, and unless rain comes soon the corn crop of southern Illinois will be materially reduced.

Although the corn is from ten to fifteen days late all over the State, the condition is so good and the growth so strong and hearty, that if early frosts do not cut it off, the corn crop of the State will be very fine.

Corn is reported as "firing" in the following counties, viz.: Wayne, Piatt, Pike, Madison, Marion, Calhoun, Clark, Douglas and Clay. Chinch bugs are injuring corn somewhat in the counties of Alexander, Bond, Boone, LaSalle, Jasper, Massac, Macoupin, Montgomery, Winnebago and Sangamon, and some kind of a worm is working at the roots of the corn in Whiteside, Winnebago, Boone, Carroll, Adams (where all the sweet corn is more or less injured), Bond, Edwards, JoDaviess and Kankakee counties. The oats louse is reported as working in the corn in Winnebago county.

The area in corn this year as reported by the assessors is 5,862,218 acres, a decrease from the 1890 area of 252,008 acres. So many counties, however, sent in incomplete returns that it is altogether probable that if full returns had been made the area would be even larger than last year.

A table published elsewhere in this report gives the area of corn in each county in the State for 1890 and 1891, together with the August 1 condition of the crop since 1889.

BROOM CORN.

The August 1 reports do not promise much over three-fourths of an average yield per acre of broom corn. The most encouraging outlook is in the northern division of the State, where the condition is 84 per cent. of an average. In the central division the August 1 condition is but 78 per cent., while in Coles and Douglas counties, where over half the broom corn of the State is grown, the prospects are favorable for but 70 and 71 per cent. of an average yield per acre respectively.

In southern Illinois the August 1 condition is 69 per cent. of a seasonable average.

SORGHUM.

The condition of this crop is more encouraging than on corresponding date last year, the August 1 reports indicating 83 per cent. of an average yield per acre. In the northern division of the State 91 per cent. of an average yield per acre is expected, in the central 83 per cent., and in the southern 74 per cent.

HEMP.

In Ogle county the area in this crop is but 30 per cent. as compared with 1890, and in Winnebago and Champaign counties the area is 20 per cent. less than last year.

The August 1 condition of the crop is favorable for 87 per cent. of an average yield per acre.

PASTURES.

Except in the central division of the State, where the August 1 condition is one point below that of the same date in 1890, the condition of pastures is much above that of last year, and this notwithstanding the fact that the dry weather has retarded their growth, and they have been very closely cropped.

They have, however, deteriorated greatly since our last report, on June 20, when the State average was 93 per cent., while now it is but 74.

In the northern division the August 1 condition is 86 per cent. and in both the central and the southern divisions 68.

In Douglas county farmers are feeding their stock for lack of pasturage, and also in some parts of Carroll and Richland counties.

In Coles county some farmers are selling their stock for this reason.

The grasshoppers are at work in the pastures in Kankakee county.

The area in pastures this year, 4,686,645 acres, is smaller than that of 1890 by 396,802 acres.

In a table published elsewhere in this report will be found the area of pastures in each county in the State for 1890 and 1891, and also the August 1 condition for twelve years past.

IRISH POTATOES.

The August 1 condition of Irish potatoes in northern Illinois is encouraging for a full average yield per acre, only 11 counties reporting a condition below the average and but one below 90 per cent., while all of the other counties report a seasonable average or better.

In the central grand division the crop is not so promising, the present condition being but 85 per cent. of an average. The condition in McDonough county is 50 per cent. better than usual at this date, and in a few other counties the condition is up to an average.

In southern Illinois the prospect is good for 82 per cent. of an average yield per acre. In the following counties in this division an average or better yield per acre may be expected: Franklin, Hardin, Johnson, Pulaski and Union.

SWEET POTATOES.

The condition of sweet potatoes at this date, 88 per cent., is 19 per cent. better than on the same date last year. The best prospect is in the northern division where 96 per cent. of an average yield per acre is expected, while in central Illinois but 87 per cent., and in southern Illinois but 81 per cent. of an average yield per acre is anticipated.

TURNIPS.

The area devoted to turnips and other root crops this season is but 95 per cent. as compared with last year, and the August 1 condition is favorable for only 87 per cent. of an average yield per acre.

TOBACCO.

In the northern grand division the August 1 condition of tobacco is encouraging for 99 per cent. of an average yield per acre, while in both the central and southern divisions but 80 per cent. of an average yield per acre may be expected.

CASTOR BEANS.

Four counties in the northern division, and ten in the southern, report on castor beans. From these reports it is found that 80 per cent. of an average yield per acre may be expected.

FIELD BEANS.

Ninety-seven per cent. of a seasonable average is the report made by correspondents in the northern division of the State on field beans, while the August 1 condition is 78 and 79 per cent. in the central and southern divisions of the State respectively.

FIELD PEAS.

The August 1 condition of field peas is rather better than that of beans, being 96, 83 and 84 per cent. in the northern, central and southern portions of the State.

FRUIT.

APPLES.

Taking the entire State into consideration, the apple crop does not promise to be over three-fourths as large as usual, though a few counties report a large yield.

In the northern division the condition of apples is above an average in the counties of Kankakee, Lake and McHenry, and the average condition of the division is 83 per cent.

Apples were injured by hail in Ogle county.

Only two counties in central Illinois, Cumberland and Ford, report the August 1 condition of apples as an average, while the condition for the whole division is but 48 per cent.

The condition of apples in the southern division is more promising than in either of the other divisions, being 94 per cent. of an average.

Worms are injuring the apples in Clinton county.

PEACHES.

Almost an average yield of peaches may be expected. In the northern division of the State the August 1 condition is above an average, and in the other portions of the State it is over 90 per cent.

The worms are in the peaches in Clinton county. In Douglas county the peaches are drying up for lack of moisture. Peaches are rotting in Pulaski county.

PEARS.

Pears do not promise quite so well as peaches, but in the northern division nearly an average yield is expected.

In central Illinois the August 1 condition is promising for 86 per cent. of an average yield and for 88 per cent. in the southern division.

QUINCES.

Very few quinces are raised in Illinois, but where there are any trees the August 1 condition is encouraging for 88 per cent. of an average yield.

PLUMS

Ninety per cent. of an average yield of plums may be expected. In quite a number of counties the yield will be larger than usual, and in Lake county double the usual crop is anticipated.

GRAPES.

Grapes do not promise so well as some seasons, and only 91 per cent. of an average crop is expected.

The drouth has injured them, as well as all other fruits, in southern Illinois particularly, where the August 1 condition is but 83 per cent.

Grapes are rotting in Cook county.

BLACKBERRIES.

Although the drouth was more severe in the southern than in other portions of the State, the August 1 condition of blackberries, which are very sensitive to drouth, was better there than in either of the other divisions, being 105 per cent of an average, as against 100 and 91 per cent. in the northern and central divisions.

In Douglas county a great many blackberries dried up before ripening for lack of moisture, while in Edgar county where the largest crop in years was expected, there will not be over three-fourths of an average yield.

In Piatt and Randolph counties all fruits are drying up, and in Richland, although fruits and berries are plentiful, the dry weather is making them small.

LIVE STOCK.

There is very little complaint of disease among live stock except among cattle, but owing to the short pasturage stock generally is rather thin in flesh. They have also suffered for water in some localities.

Hog cholera is reported from the counties of Kendall, Brown, Christian, DeKalb, where it has been very fatal, Marion, Marshall, Stark, Hancock, Hardin, Pope, Henderson, Fulton, Greene, Randolph, Saline, Wabash and Wayne. In Marshall county a new disease is affecting the young pigs and many of them are dying. One of the symptoms is the loss of eyesight.

In Calhoun county there has been a few cases of tetanus among horses and mules, and in Madison county there has been a little farcy and distemper among horses. Distemper is also reported from Hamilton, Woodford and Iroquois counties.

In Effingham county there is some complaint of colic among horses.

The most serious disease among stock is that prevailing among cattle, which has been quite general over the State, and has caused great alarm among farmers, but has not been very fatal. The first affection being on the feet and mouth, many farmers and even some veterinarians, jumped at the conclusion that it must be the virulent 'foot and mouth' disease of the Old World, and were accordingly frightened; but the result of examinations made by our most experienced veterinarians, some of whom had seen the disease beyond seas, proves that it is not that much-to-be-dreaded malady, but a new disease heretofore unknown to veterinary science.

It made its first appearance in this State and Iowa last season, but so few cattle were affected by it that it did not create general alarm, but it has been so widespread this season that it was feared it would be very serious.

It is so new that the proper treatment for it and its cause have not yet been discovered, but the State Board of Live Stock Commissioners is giving the subject attention, and has issued one bulletin on the subject which is published in this report. The result of their later researches will be given to the public through the press as soon as formulated.

The counties reporting this disease as prevalent are the following, viz.: DeWitt, Douglas, Edwards, Fulton, Gallatin, Hamilton, Hancock, Hardin, Henderson, Jasper, Knox, LaSalle, Logan, Lawrence, Macon, Macoupin, Marshall, Mason, Massac, McLean, Menard, Mercer, Peoria, Piatt, Pope, Putnam, Rock Island, Saline, Stark, Tazewell, Wabash and Wayne.

DRAIN TILE.

During the year 1890 there was 33,481,620 feet of drain tile laid in Illinois, of which fully two-thirds was in the northern division of the State, a little less than one-third in the central division, while but 142,423 feet was laid in southern Illinois.

The total amount of tile now draining the lands of Illinois is 555,933,691 feet, an average for the State of 28 feet per cultivated acre.

In the northern division the average number of feet of tile to each cultivated acre is 26; in the central division 44, and in the southern but 1½.

Macon county is reported to have 216 feet of tile to each cultivated acre, the highest average in the State, while many counties in southern Illinois have less than 1 foot per acre.

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their prompt and seasonable appearance during the growing season, and immediately after harvest when the information as to condition and yield is most needed to enable the producer and the public to decide as to the extent of the supply and the market value of the crop. The official acreage of the crops, as reported by assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested crop. In reporting condition, 100 is used by correspondents to represent a fair seasonable average vitality or growth unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent, is recorded 110; a decrease of five per cent. is marked 95, etc. The correspondents of the Department are, as a rule, experienced farmers who have made the study of the condition and yield of crops their life work; conservative men who realize the necessity for the work done by this Department and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates, for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary.

BULLETIN NO. 1.

State Board of Live Stock Commissioners.

A NEW DISEASE AFFECTING CATTLE.

A new disease having appeared in several sections of this State among cattle, in the summer of 1890, and again reappearing within the last few weeks, over a greater extent of territory, causing much loss to owners, from loss of flesh and milk, and a few fatalities, the Board of Live Stock Commissioners of Illinois, has caused an investigation of the disease to be made in several sections of the State, by means of post-mortem examinations by Dr. John Casewell, M. R. C. V. S., State Veterinarian, and Prof. A. H. Baker, of the Chicago Veterinary College and Assistant State Veterinarian, with a view of ascertaining the true nature of the disease; if possible, the cause, and the treatment necessary to effect a cure. The results of these investigations, the symptoms of the disease as observed, ante-mortem and post-mortem, and the recommendations as to treatment are given in the following concise report of the Veterinarians to the Board:

SYMPTOMS.

"The disease manifests itself by the following symptoms: Swelling of the muzzle, soreness of the mouth and feet, drying up of the milk (in cows), loss of appetite or inability to eat, loss of cud, rapid loss of flesh, soreness of the tongue two or three inches up from the point, and sometimes protruding from the mouth, soreness of the gums and nostrils, more or less discharge of mucous from the nose, which coagulates and accumulates, partially closing the openings. The soreness of the feet and legs seems to be in the skin, which is swollen from the hoofs upward, in bad cases nearly to the body and cracks in transverse fissures at the fronts of hocks and backs of knees, and the animals are inclined to lie down most of the time, or are disinclined to move. At the time of the swelling of the muzzle, there appear little red dots which spread and run together forming brown patches, and in this stage, desquamation (skin peeling off) takes place leaving raw surfaces which heal slowly.

The following evidences of disease are seen on post-mortem examination: Extensive irritation of the lining of the stomach and bowels, and, in bad cases, considerable inflammation of it. The contents of the stomachs and bowels are soft, from excessive secretion of mucous which accounts for the diarrhea seen in many of the more severe cases. The other internal organs present no evidences of disease.

PROBABLE CAUSE.

From what observations we have made, it seems to us that this disease is not contagious, but due entirely to some acrid substance which forms on, or within, some plant which is taken in with the food, for only those parts of the body which come in contact with the food, either before or after it is eaten, are affected.

TREATMENT ADVISED.

The following treatment, which is very simple, seems to have a very beneficial effect, even severe cases recovering rapidly: Linseed oil (raw) in pint doses, three times a day, until the bowels move freely, and for local application, a solution of borax, as strong as water will dissolve it, three times a day, applied to the mouth and nose with a sponge.

The animal while under treatment should be kept under cover and fed on sloppy food."

The above is published in order that owners of cattle affected may avail themselves of the information obtained by the investigations had, and be able to promptly apply the remedy. Prompt action on the part of owners, on noticing the first symptoms of the trouble will prevent any serious loss. The disease appears more prevalent among milch cows than steers, but the per cent. of fatalities is not to exceed two per cent. of the animals affected.

The Board expects to pursue investigations further with a view of ascertaining positively, if possible, the cause of the disease, and if discovered, publication of the fact will be made.

H. MCCHESENEY,
EDWIN WATTS,
R. N. MCCAULEY,

Board of Live Stock Commissioners of Illinois.

C. P. JOHNSON,
Secretary.

SPRINGFIELD, ILL., August 5, 1891.

ILLINOIS CROP REPORT,

—FOR—

DECEMBER 1, 1891.

Synopsis of the Reports of Correspondents upon the Yield of the
Principal Crops, Etc.

ILLINOIS STATE BOARD OF AGRICULTURE, }
SPRINGFIELD, December 1, 1891. }

The information contained in this report as to acreage of crops and number of head of live stock was obtained from the reports of assessors made to this Department as required by law.

The data in regard to yield per acre, price of crops and value of crops and live stock was obtained from crop correspondents, who number nearly six hundred, and represent every section of the State.

The correspondents are, as a rule, reputable farmers of extended experience who are deeply interested in the accuracy of the reports made by this Department.

A large number of the correspondents have been reporting to this Department for the past fifteen years and their estimates, for a term of years, when compared with the subsequent official returns made by assessors, have confirmed the superior judgment and conservative character of the reporters.

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it has been found advisable to divide the same into three divisions in reporting the condition and yield of crops.

WINTER GRAIN.

WHEAT.

There was an increased area seeded to wheat this fall over that of a year ago of four per cent.

In the northern division of the State the acreage is three points below that seeded in 1890, but this decrease is counteracted by the larger area in the central and southern divisions, where the area seeded is 103 and 106 per cent. respectively.

The area seeded in 1890 was 1,817,378 acres, while in 1891 there was 1,895,146 acres, which is distributed among the three grand divisions of the State as follows: Northern Illinois, 114,315 acres; central Illinois, 858,957 acres; southern Illinois, 921,874 acres.

The dry weather of the late summer and early fall was very inimical to seeding, and much land that was plowed for wheat was not seeded. Had the weather been favorable it is probable that an unusually large area would have been seeded, as there was a decided tendency in that direction, but it was prevented.

The December 1 condition of wheat is much poorer than usual, being but 79 per cent. of a seasonable average. The same causes which prevented seeding militated against the growth of the plant, and much that was planted did not come up, while that that did show itself above ground is not in a condition to stand a severe winter.

The December 1 condition in the northern division of the State is 81 per cent.; in the central 82, and in the southern division 74 per cent.

Some depredation has been committed by Hessian fly in the counties of Knox, Christian, Cumberland, Morgan, Shelby, Jasper and Randolph, and chinch bugs injured wheat slightly in Boone and LaSalle counties, but the damage done was so small as not to be taken into consideration in a general estimate.

RYE.

The area seeded to rye this season, 171,914 acres, is five per cent. less than that of 1890 when there was 180,190 acres seeded.

In the northern division of the State, where nearly 90 per cent. of the rye is grown, the 1891 area is 6 points below that of 1890; in the central division it is 7 points above, and in the southern division 2 points below the area of last year.

The drought injured the prospects of the rye crop, and should there be no improvement in its condition between now and harvest there will be little over three-fourths of an average yield per acre.

There is very little difference in the condition of the crop in the various sections of the State. In the northern part it is 83 per cent. of an average; in the central 85, and in the southern division 80 per cent.

CORN.

Although the area in corn this season was the smallest of any year since 1872, the large average yield of 38 bushels per acre brought the total yield up to 217,982,050 bushels.

The yield in northern Illinois amounted to 106,928,215 bushels, an average of 38 bushels per acre. In the central division of the State the average yield per acre was 41 bushels, making a total yield for this section of 87,636,940 bushels, while in southern Illinois, where the average yield per acre was but 29 bushels, the total yield was 23,416,895 bushels.

The largest average yields per acre were 52 bushels in Bureau county, and 50 in Piatt. Perry county reports but 15 bushels per acre.

QUALITY.

The quality of the corn raised this year is, as a rule, excellent. The few rains with which we were favored during the growing season came very opportunely for the corn so that it did not suffer greatly from the drought, and the long, dry fall insured its ripening well.

Light, chaffy or mouldy corn is reported only from the counties of Henderson, Kane, Knox, Clark, Coles, Cumberland, Douglas, Gallatin and Massac, and the reports from Gallatin county state that there is more frost-bitten corn there than for several years. In Lake county some of the late corn dried up instead of maturing. Some damage was done

to corn by chinch bugs in Boone, LaSalle, McHenry, Winnebago, Sangamon, Shelby and Bond counties, and a grub at the roots injured it to some extent in the counties of Boone, DuPage, Kane, Kankakee, Lake, Winnebago and Bond. Other insects were noted in corn as follows: Cut worms were noticed in Kankakee county; lice in Knox and Marshall counties; wire worm in McHenry county, even on well drained ground; grass-hoppers in Whiteside county, and the corn flea in Jersey county.

VALUE OF CROP.

There has not been a crop of corn raised in ten years past which was so profitable to the producer as that of 1891, when the value of the crop, at ruling prices to the producer on December 1 was \$83,990,210, and when the cost of production is taken into consideration, the net profit to the farmers of the State, of \$32,108,150, has been exceeded but once since 1859, and that was in 1864, when corn was quoted at 75 cents per bushel.

A table published elsewhere in this report gives by counties the area, yield and value of the corn crop for the current year.

The area, yield and value of the corn crop of the State for the past thirty-two years, is given in the following table:

YEAR.	Number of acres.	Average yield per acre.	Bushels produced.	Price per bushel—cents.	Total value.	Value per acre.	Cost of production per acre.	Total cost of production.	Profit.	Loss.
1860.....	3,839,159	30	115,174,770	42½	\$48,944,277	\$12 74	\$10 50	\$40,311,169	\$8,633,108

BROOM CORN.

There has not been so small an area devoted to broom corn in Illinois since 1877, where there was 14,566 acres, as in 1891, when but 15,875 acres were reported to assessors.

In the largest broom corn counties in the State, Coles and Douglas, but little over 6,00 acres each was sown.

The area in northern Illinois was 2,555 acres; in central Illinois 13,169 and in the southern division of the State, 151 acres.

The average yield per acre was but little over $\frac{1}{4}$ of a ton (576 pounds), and the total yield was only 4,569 tons, the smallest production since 1876.

The price per ton, \$117, has been exceeded but once in the past fifteen years, but the total value of the crop is but \$532,985.

The following table gives the area, yield and value of the broom corn crop of Illinois since 1876:

YEAR.	Acreage.	Av. yield per acre— lbs.	Total yield— pounds.	Price per ton.	Value of crop.
1877.....	14,566	458	6,674,747	\$71 20	\$237,594

1891.....	15,875	576	9,138,000	117 00	532,985

SORGHUM.

Judging from the reports of the assessors the production of sorghum does not receive the favor of Illinois husbandmen, as there has been a steady decrease in the areas planted for the last eight years.

The 1891 area of 6,980 acres, is 1,732 acres less than that of 1890. The largest area reported is in Marion county, 1,138 acres, and the largest yield per acre, 200 gallons, in Stephenson and Jackson counties. The average yield per acre was 90 gallons, making the total yield 629,709 gallons.

The average price per gallon was 41 cents, and the total value \$256,909.

The following table gives the area, yield and value of the sorghum produced in the State since 1876:

YEAR.	Acreage.	Av. yield per acre— gals.	Total number of gallons.	Price per gallon.	Value of crop.
1877.....	19,335	63	1,237,164	\$0 42	\$515,409
1878.....	14,638	80	1,174,549	45	528,547

1891.....	6,980	90	629,709	41	256,909

BUCKWHEAT.

Crop Production.

The area in buckwheat this year, 2,054 acres, is the smallest area in this crop since 1876. The average yield per acre of 18 bushels is rather above the normal, and the total yield is 36,881 bushels.

Buckwheat has not brought so high a price per bushel to the producer since 1882 as this year, when it was worth 69 cents per bushel. The total value of the crop is \$25,539.

The following table gives the area, yield and value of the buckwheat crop in this State for the past fifteen years:

YEAR.	Acreage.	Av. yield per acre.	Bushels produced.	Price per bushel.	Value of crop.
1877.....	15,880	13	207,696	\$0 73	\$151,612
1878.....	16,060	9	155,340	1 33	206,608
1879.....	10,786	10	112,180	77	85,257

1890.....	3,080	15	47,707	60	28,536
1891.....	2,054	18	36,881	69	25,539

TIMOTHY SEED.

Both the yield and price of timothy seed this year are much smaller than usual, there being but 170,181 bushels produced, and at the low price of \$1.20 per bushel, the producer received but \$208,069.

The following table gives the amount and value of the crop in the State since and including 1877:

YEAR.	Bushels produced.	Price per bushel.	Total value.
1877.....	483,571	\$1 25	\$604,464
1878.....	261,559	1 25	326,949
1879.....	213,329	2 25	479,990
1880.....	400,124	2 20	880,272
1881.....	426,531	2 60	1,108,980
1882.....	320,653	1 68	538,697
1883.....	358,895	1 35	476,447
1884.....	389,056	1 30	512,438

1887.....	139,561	2 25	311,421
1888.....	134,006	1 70	224,651
1889.....	323,763	1 35	434,300
1890.....	182,635	1 25	228,277
1891.....	170,181	1 20	208,069

CLOVER SEED.

Since 1885 there has not been so light a crop of clover seed as in 1891, when but 74,729 bushels were produced.

The price per bushel, \$4.05, is above that of the last two years, and the total value is \$303,756.

A table published elsewhere in this report gives the number of bushels of clover seed produced in Illinois in 1891, together with the value of the crop.

In the following table will be found the yield and value of the crop of clover seed for 1891, as well as for the fourteen years preceding:

YEAR.	Bushels produced.	Price per bushel.	Total value
1877.....	64,686	\$4 80	\$310,493
1878.....	77,388	4 05	313,421
1879.....	138,191	5 00	690,955
1880.....	87,144	4 60	400,862
1881.....	125,042	5 20	650,218
1882.....	55,862	5 00	279,310
1883.....	78,656	4 75	375,066

1888.....	122,906	4 60	563,412
1889.....	78,005	3 15	245,695
1890.....	191,596	3 80	729,638
1891.....	74,729	4 05	303,756

HUNGARIAN AND MILLET.

The amount of Hungarian and millet produced in Illinois in 1891, 34,258 bushels, was 4,930 bushels less than the crop of 1890.

The price obtained per bushel, 67 cents, was the highest price received for this crop for a number of years, but the total value amounted to only \$22,904.

The following table gives the yield and value of this crop since 1876:

YEAR.	Bushels produced.	Price per bushel.	Total value.
1877.....	17,463	\$0 65	\$10,701
1878.....	26,787	55	14,733
1879.....	43,776	75	32,832
1880.....	66,889	70	46,752
1881.....	76,180	95	72,370
1882.....	77,423	60	53,422

1888.....	55,388	63	35,126
1889.....	154,468	49	75,944
1890.....	39,188	63	24,668
1891.....	34,258	67	22,904

BEANS.

With a slightly smaller area than that of 1890, when there was 1,391 acres in beans, against 1,023 acres in 1891, the total yield of this crop was 22,422 bushels. The average yield per acre, 22 bushels, is the largest reported for fifteen years past.

The price per bushel, \$1.95, while not quite so high as that of 1890, is above the average. The total value of this crop for the current year is \$43,826.

The following table gives the area, yield and value of the 1891 crop of beans, together with those of fourteen years preceding:

YEAR.	Acreage.	Av. yield per acre.	Yield in bushels.	Price per bushel.	Value of crop.
1877.....	1,545	13	19,955	\$1 50	\$29,916
1878.....	1,669	16	18,627	1 35	25,146
1879.....	2,674	14	36,217	1 50	53,225
1880.....	1,398	11	15,894	1 60	25,430

1891.....	1,023	22	22,422	1 95	43,826

CASTOR BEANS.

The tendency towards the cultivation of castor beans, which was so noticeable a few years ago, seems to have subsided, and for several years the area devoted to this crop

has steadily grown smaller. Only 5,761 acres are reported in castor beans this year, all but 15 acres lying in the southern division of the State.

The average yield per acre of 6 bushels was unusually small, and the total yield was 37,151 bushels.

The price per bushel, \$1.50, is the same as a year ago, the total value of the crop amounting to \$55,398.

In the following table is given the area, yield and value of the last fifteen crops of castor beans:

YEAR.	Acreage.	Av. yield per acre— bushels.	Yield in bushels.	Price per bushel.	Value of crop.
1877.....	4,503	3 $\frac{3}{4}$	17,538	\$1 10	\$19,512

TOBACCO.

There has never been so small an area of tobacco reported in this State as in 1891, when only 781 acres was reported to assessors, but little more than 50 per cent. of the 1890 area.

The average yield per acre, 887 pounds, while considerably less than a year ago, is still above the average. The total yield for this year is 692,747 pounds, which at the ruling price December 1 of 7 cents per pound, returned to the producer \$50,480.

The following table gives the area, yield and value of the crop in this State since 1876:

YEAR.	Acreage.	Av. yield per acre— pounds.	Pounds produced.	Price per pound.	Value of crop.
1877.....	12,320	640	7,885,586	\$0 08	\$638,848

1891.....	781	887	692,747	07	50,480

PASTURES.

A smaller area was devoted to pastures this year than for several years past, but 4,681,972 acres being reported.

The drought of the summer and early fall was very injurious to pastures, and they were not so profitable to the farmer as usual. In some counties in central Illinois farmers were obliged to feed their stock during the summer, or else sell it, on account of the lack of pasturage. In the northern portion of the State pastures were valued at \$3.65 per acre; in the central division at \$4 05 per acre, while in southern Illinois they were valued at but \$2.85 per acre. The total value of the pastures of the State this year was \$17,148,320.

A table published elsewhere in this report gives the area and value of pastures in each county in the State.

The following table gives the area and value of pastures for fifteen years past:

YEAR.	Acreage.	Value per acre.	Total value.
1877.....	4,367,603	\$3 38	\$14,764,112
1878.....	3,983,450	3 10	12,324,657

VEGETABLES.

IRISH POTATOES.

The area in Irish potatoes this year, 103,848 acres, is much larger than that of 1890, but not up to an average for ten years past. The average yield per acre, 111 bushels, is a high average, and the total yield of 11,524,618 bushels compares favorably with the yield of previous years. The prevailing price per bushel December 1, 34 cents, made an aggregate value to the producer of \$3,955,879, a profit over the cost of production of \$1,781,372.

The following table gives the area, yield and value of the Irish potato crops of the State since 1859:

YEAR.	Number of acres.	Average yield per acre—bushels.	Bushels produced.	Price per bushel.	Total value.	Value per acre.	Cost of production per acre.	Total cost of production.	Profit.	Loss.

SWEET POTATOES.

With the exception of 1889, the area in sweet potatoes this year is the largest of which we have any record, the assessors returning 3,528 acres. The average yield per acre, 104 bushels is also above the normal, so that the sweet potato crop of 1891 is the largest on record, being 397,159 bushels.

The price per bushel, 62 cents, is not up to the average, but the large yield makes the total value of the crop, \$247,205, unequalled by that of any previous year since 1876.

The following table gives the area, yield and value of the sweet potato crop of the State since 1876:

YEAR.	Acreage.	Av. yield per acre— bushels.	Yield in bushels.	Price per crop.	Value of crop.
1877.....	2,355	63	148,270	\$0 85	\$126,029
1878.....	1,729	67	116,944	85	99,402

1890.....	2,492	91	226,319	93	207,580
1891.....	3,828	104	397,159	62	247,205

TURNIPS AND OTHER ROOT CROPS.

Nearly twice as large an area was devoted to turnips and other root crops in 1891 as in 1890, the 1891 area being 5,208 acres.

The average value per acre, \$39.40, is the lowest ever reported. The total value is \$207,780. The average yield of turnips per acre was 131 bushels.

The following table gives the acreage and value of turnips and other root crops grown in the State during the past fifteen years:

YEAR.	Acreage.	Value per acre.	Value of crop.
1877.....	7,056	\$39 55	\$279,136
1878.....	3,775	40 85	154,140
1879.....	3,139	230 15	722,444
1880.....	2,300	45 85	105,414
1881.....	3,046	147 20	448,369

1889.....	4,509	118 42	533,950
1890.....	2,793	46 16	128,947
1891.....	5,208	39 40	207,780

OTHER CROPS NOT NAMED.

The miscellaneous small crops, including market gardens, amount in a year to quite a large sum, but they are composed of so many different items that it is impossible to give a detailed table of each of them.

It was therefore thought advisable to combine them in one table under the above caption, and such a table will be found elsewhere in this report.

The returns made to assessors place the grand total receipts from these various sources at \$286,661, of which over 50 per cent. is reported from Cook county.

LIVE STOCK.

HOGS.

The reports of assessors show a decrease in the number of hogs in the State as compared with 1890, there being but 3,305,252 reported this year. The equalized value of

hogs being \$1.25 per head, would make the total value \$4,131,570. The number of hogs marketed was 2,743,350, with an average weight of 231 pounds, and a gross weight of 634,244,664 pounds. The average price received for hogs marketed during the season, \$3.80 per cwt., was a trifle better than for two years past, and returned to the feeders \$24,032,232.

Hog cholera has been very prevalent, and reduced the supply on hand December 1, as compared with same date in 1890, 13 per cent.

This disease is reported from the counties of Bureau, DeKalb, Grundy, Henderson, Kane, Kankakee, Kendall—where it has been very bad in some sections, and especially fatal among pigs—Knox, Lake, LaSalle, Livingston, Marshall, Mercer, Putnam, Rock Island, Stark, Warren, Whiteside, Woodford, Adams, Brown, Cass, Champaign, Christian, Coles, DeWitt, Douglas, Fulton, Green, Hancock, Jersey, Logan, Macoupin, McDonough, McLean, Morgan, Moultrie, Pike, Sangamon, Tazewell, Vermilion, Alexander, Effingham, Johnson, Massac, Monroe, Perry, Pope and White.

In Macon county a lung disease has prevailed among hogs.

In Cook county the hogs have been affected with some disease other than cholera. They get very thin and weak, and foot rot sets in. They usually linger two or three weeks before they die.

The following table gives the number of hogs assessed and marketed in 1891, as well as their weight and value, for the last thirty-six years:

YEAR.	Assessors' Returns		Estimated percent marketed.	Number fat hogs market'd	Av. gross weight per head.	Total gross weight.	Value per 100 lbs. gross.	Total value hog product.
	Number.	Value.

CATTLE.

The assessors report but 1,853,318 head of beef cattle in the State last May.

At the equalized value of \$6.30 per head, they represent a capital of \$11,675,903 to the cattle-raiser. Of this number 23 per cent., or 426,248, were marketed, with an average weight of 1,097 pounds, and a gross weight of 467,593,498 pounds.

Prices of beef cattle have been a little better for the last twelve-month than for four years past, those marketed bring an average of \$3.40 per cwt., or \$15,985,158.

With the exception of the so-called "foot-and-mouth disease," which prevailed during the summer, cattle have been very healthy.

This disease, which was very alarming on its appearance, did not prove as serious as was anticipated, very few cattle dying from its effects, and most of them seeming to recover from it entirely.

The number of dairy cows assessed was 656,796, with an average value of \$26 per head, and a total value of \$17,342,362.

The following table gives the number, weight and value of the cattle marketed in the State since 1855:

YEAR.	Assessors' Returns		Estimated per cent marketed.	Number beef cattle market'd	Av. gross weight per head.	Total gross weight.	Value per 100 lbs. gross.	Value beef cattle marketed.

SHEEP.

There is very little difference between the number of the sheep assessed in the State in 1890 and 1891, the number in the latter year being 635,874.

The number marketed was 139,885, with a gross weight of 14,111,645 pounds, or an average weight of 101 pounds per head.

For seven years past there has been a steady appreciation in the value of sheep and the price obtained for the season of 1891, \$3.95 per cwt., is the highest obtained since 1877.

The total value of the sheep sold is \$558,331.

The supply of sheep on hand December 1 is but 91 per cent., as compared with December 1, 1890, and the market price December 1, \$3.90 per cwt., is not quite so good as that received earlier in the season.

WOOL.

The wool clip of 1891 is considerably larger than that of 1890, and amounts to 2,782,684 pounds, which at the ruling price of 23 cents per pound, returned to the wool-grower the sum of \$631,790.

The following table gives the number of pounds shorn, the price per pound, and the total value of the wool clip for the last fifteen years.

HORSES.

Fewer horses and colts were reported by assessors this year than for a number of years past. The number reported this year was 869,632.

The number of colts foaled in 1890 was 126,934.

Disease has been reported in a number of counties as follows: In Cook county there was a good deal of influenza in a mild form; in LaSalle, Knox and Edwards counties horses have been affected with the so-called foot-and-mouth disease which prevailed among cattle during the summer; two cases of glanders were reported in Woodford county, where there was also some distemper; distemper was also reported from Brown, Calhoun, Douglas, Green, Hancock, McLean, Sangamon, Bond, Edwards and Jasper counties. Epizootic has prevailed in the counties of Livingston, Calhoun, McLean and Menard.

Pink-eye is reported from Cass, Edwards and Franklin counties; glanders in Pike and Bond, and blind staggers in Alexander. In Clark county an unknown disease has affected some colts, and a throat disease in Greene county.

The following table gives the number of horses assessed in the State since 1855, and their equalized valuation, as well as the number of colts foaled each year.

DAIRY PRODUCTS.

MILK.

The amount of milk sold in 1891, 91,263,464 gallons, is the greatest ever sold in the State, except in 1879.

The price per gallon, 13 cents, while slightly below the 1890 price, is still above an average, and the total value of the milk sold in the State during the past year is \$12,106,797.

The following table gives the number of gallons and value of the milk sold in the State during the past fifteen years:

YEAR.	Gallons sold.	Price per gallon.	Total value.
1877.....	17,124,506	\$0 11 1-6	\$1,912,236
1878.....	30,567,415	10 ¹ / ₂	3,209,579
1879.....	96,659,845	08	7,732,788

CHEESE.

The following table shows the quantity and value of the cheese sold in the State since 1876:

YEAR.	Pounds sold.	Price per pound.	Total value.
1877.....	4,502,671	\$0 12	\$540,320
1878.....	5,139,914	10	513,691
1879.....	6,618,212	13	860,367
1880.....	6,187,680	13	803,398
1881.....	5,837,974	15	875,696
1882.....	5,252,036	14	735,285
1883.....	4,931,826	14	672,474
1884.....	4,795,677	10	488,622
1885.....	2,312,266	10	230,795
1886.....	2,557,865	10	267,503
1887.....	3,484,933	12	422,018
1888.....	2,064,134	12	253,618
1889.....	1,600,592	12	185,778
1890.....	1,704,536	12	205,669
1891.....	1,186,133	12	148,488

Tables published elsewhere in this report give, by counties, the quantity and value of the dairy products of the State for 1891.

An examination of these tables discloses the fact, perhaps not generally known, that the dairy interest is very slightly developed in the central and southern divisions of the State—fully nine-tenths of the amount received from this industry being in the northern division.

FRUITS.

APPLES:

The 1891 crop of apples is somewhat larger than that of last year, but is still very much below the normal production of this fruit. Only 1,613,430 bushels were raised in Illinois this year.

The price per bushel, 63 cents, is a very fair average.

The total value of the crop was \$1,022,036.

The following table gives the number of bushels of apples, and the value of the crops, since 1876:

YEAR.	Number of bushels.	Price per bushel.	Value of crop.
1877.....	5,395,351	\$0 80	\$4,316,281
1878.....	4,940,811	65	3,211,527
1879.....	5,958,690	75	4,469,017
1880.....	10,342,186	56	5,791,624
1881.....	2,659,529	1 22	3,244,625
1882.....	6,557,128	80	5,245,702
1883.....	6,818,520	75	5,134,042

1889.....	5,016,616	56	2,822,859
1890.....	1,460,408	96	1,398,954
1891.....	1,613,430	63	1,022,036

PEACHES.

This fruit was much more plentiful this year than last, there being nearly three times as large a quantity raised in 1891 as in 1890.

The 1891 crop amounted to 107,646 bushels, which at the ruling price of \$1.25 per bushels, returned to the peach raiser \$133,713.

The following table gives the quantity and value of the peaches produced in the State during the past fifteen years:

YEAR.	Number of bushels.	Price per bushel.	Value of crop.
1877.....	402,587	\$0 92	\$370,280
1878.....	607,292	62	376,521
1879.....	25,749	1 34	34,503
1880.....	398,970	80	219,176
1881.....	96,507	1 55	149,586

OTHER FRUITS AND BERRIES.

The following table gives the acreage and value of other fruits and berries not named above, for the past fifteen years:

YEAR.	Acreage.	Value per acre.	Value of crop.
1877	4,523	\$35 53	\$178,800
1878	2,569	55 51	197,581
1879	3,111	59 62	185,488
1880	7,803	29 65	231,417
1881	7,670	26 34	298,086
1882	5,881	47 50	279,360
1883	4,583	58 33	267,313
1884	10,181	24 63	250,747
1885	6,401	32 46	305,123
1886	7,884	29 82	235,140
1887	7,528	27 25	205,140
1888	5,908	25 10	148,340
1889	5,626	22 50	126,685
1890	5,213	18 42	96,049
1891	4,897	23 76	116,340

STRAWBERRIES.

The value of the strawberry crop was much less this year than last, but \$126,250 being returned to the producer this year.

Of this amount \$27,693 came from northern Illinois; \$13,606 from central Illinois, and \$84,951 from the southern division of the State.

A table published elsewhere in this report gives the value of the strawberries raised in each county in the State in 1891.

WATERMELONS.

A much larger return was received from watermelons this year than in 1890, the value of the crop being given as \$49,304. Of this amount \$20,262 was produced in the northern division of the State; \$19,596 in central Illinois, and \$9,446 in the southern division.

With the exception of grapes and watermelons, much the greater portion of Illinois fruit is raised in the southern division of the State, where this industry is yet in its infancy, and it is confidently believed that before many years have passed southern Illinois will be one of the greatest fruit producing regions of this country.

HONEY.

The year 1891 was very unfavorable to the production of honey, and only three-fourths as much was made as in 1890. The 1891 product amounted to 821,678 pounds, which brought, on an average, 14 cents per pound. The total value of the honey produced in 1891 was \$112,934. The number of hives of bees reported in 1891 was 120,252.

POULTRY AND EGGS.

One can form but little idea of the value to the farmers of these apparently insignificant sources of revenue until the figures are placed before him.

In 1891 the value of poultry sold, from the farm, was \$1,277,629, and of eggs, \$1,142,233, a total of nearly two millions and a half dollars.

SUMMARY.

The following table gives in small space the value of the principal farm products and live stock of Illinois for the year 1891.

Corn	\$83,990,210
Winter wheat.....	26,583,636
Spring wheat....	818,926
Oats.....	32,312,485
Rye	2,541,905
Barley	329,220

Clover seed.....	303,756
Hungarian and millet seed.....	22,904
Flax seed.....	40,611
Irish potatoes.....	3,955,879
Sweet potatoes.....	247,205
Turnips and other root crops.....	207,780
Broom corn.....	532,985
Sorghum	256,909
Beans.....	43,826
Castor beans.....	55,398
Tobacco.....	50,480
Other crops not named.....	286,661
Apples.....	1,022,036
Peaches.....	133,713
Pears	8,149
Grapes	68,272
Strawberries.....	126,250
Watermelons	49,304
Other fruits and berries.....	116,340
Wine.....	92,828
Honey	112,934
Horses (equalized value).....	19,097,119
Beef cattle (equalized value).....	15,985,158
Dairy cows.....	17,342,362
Hogs (equalized value).....	4,131,570
Sheep (equalized value).....	680,385
Wool.....	631,790
Milk sold....	12,106,797
Cream sold.....	1,587,500
Butter sold.....	4,454,717
Cheese sold	148,488
Poultry sold.....	1,277,629
Eggs sold.....	1,142,233
Total.....	\$257,332,190

AGRICULTURAL STATISTICS.

The value of the crop statistics collected by this Department consists in their seasonable appearance during the growing season, and immediately after harvest, when the information as to condition and yield is most needed to enable the producer and the public to decide as to the market value of the crop. The official acreage of the crops, as reported by the assessors, is used as a basis for applying the estimates of crop correspondents as to the growing condition or yield of the harvested crop. In reporting condition, 100 is used by correspondents to represent a fair, seasonable, average vitality or growth, unaffected by storms, insects or contingencies; an increase of one-tenth, or ten per cent., is recorded 110; a decrease of five per cent. is marked 95, etc. The correspondents of the Department are, as a rule, experienced farmers who have made the study of the conditions and yield of crops their life work—conservative men who realize the necessity for the work done by this Department, and assist it by their gratuitous reports.

It is not pretended that these reports will exactly coincide with the official assessors' returns, but they do represent the condition or yield of the various crops, etc., at the dates given, as estimated by men experienced in this work, and their estimates, for a term of years, will be found to closely approximate the assessors' returns.

W. C. GARRARD,

Secretary.

MARKET PRICE FARM PRODUCTS DECEMBER 1, 1891.

NORTHERN DIVISION.

NAMES AND POST OFFICE ADDRESS

—OF—

CROP CORRESPONDENTS

STATE BOARD OF AGRICULTURE,

FOR THE YEAR 1891,

WITH DATE OF APPOINTMENT.

ADAMS COUNTY—

1877, A. R. Wallace, Camp Point.
1879, G. W. Dean, Adams.
1883, H. C. Cupp, Fall Creek.
1888, C. H. Rankin, Fall Creek.

ALEXANDER COUNTY—

1894, J. R. F. Standard, Elco.
1887, Jos. L. Glasgow, Olive Branch.
1888, S. H. Yates, Commercial Point.
1891, C. O. Foster, Commercial Point.

BOND COUNTY—

1877, John B. McFarland, Reno.
1882, W. D. Henry, Beaver Creek.
1884, E. L. Williford, Old Ripley.
1885, J. B. Denny, Sorrento.
1885, W. H. Taylor, Tamalco.

BOONE COUNTY—

1877, George Reed, Belvidere.
1877, S. C. Fox, Garden Prairie.
1877, E. E. Moss, Belvidere.
1885, Stanley T. Heath, Capron.

BROWN COUNTY—

1877, Henry D. Ritter, Versailles.
1889, W. B. Rigg, Mt. Sterling.
1889, Jos. W. Curry, Mt. Sterling.

BUREAU COUNTY—

1877, James F. Mallet, Milo.
1878, J. Y. Spangler, New Bedford.
1885, R. B. Frary, LaMoille.
1885, Louis Zearing, Arlington.
1886, C. P. Mason, Buda.
1888, L. R. Bryant, Princeton.

CALHOUN COUNTY—

1881, M. A. Kamp, Kampsville.
1887, Samuel J. Merida, Mozier.
1891, Jacob Auer, Deer Plain.
1891, Isaac S. Berry, Batchtown.
1891, John A. Squier, Hardin.

CARROLL COUNTY—

1882, John Cole, Thompson.
1882, S. Preston, Mt. Carroll.
1884, Peter Hyzer, Shannon.
1888, Whitney Inman, Milledgeville.

CASS COUNTY—

1878, John H. Goodell, Chandlerville.
1878, John Beggs, Ashland.
1878, John K. Clark, Bluff Springs.

CHAMPAIGN COUNTY—

1877, W. A. Conkey, Homer.
1885, W. E. Dawley, Seymour.
1888, W. H. Morgan, Tolono.
1888, Lewis Martin, Rantoul.

CHRISTIAN COUNTY—

1877, J. B. White, Morrisonville.
1877, John W. Hunter, Owanece.
1877, A. B. Herdman, Morrisonville.
1878, O. S. Nash, Sharpsburg.
1880, J. R. Hill, Edinburg.
1885, J. Slate, Edinburg.

CLARK COUNTY—

1877, James B. Sheapley, Martinsville.
1877, F. B. Ennis, Dolson.
1877, R. E. Scott, Casey.
1880, L. B. Anderson, Darwin.
1880, Jerry Ishler, Martinsville.
1880, B. B. Tarman, Orange.

CLAY COUNTY—

- 1877, W. W. Bowler, Flora.
- 1880, Theron Gould, Bible Grove.
- 1882, A. W. Bothwell, Clay City.
- 1887, John R. Bryan, Xenia.
- 1891, Edgar Hayes, Iola.

CLINTON COUNTY—

- 1878, John Burton, Trenton.
- 1887, W. H. H. Nichols, Carlisle.
- 1888, B. I. Gerdes, Huey.
- 1889, A. E. Phillips, Aviston.
- 1888, Mrs. W. H. Russell, Shattuc.
- 1890, John B. Heimann, Damiansville.

COLES COUNTY—

- 1880, J. F. Dora, Charleston.
- 1882, E. G. Patterson, Mattoon.
- 1883, W. D. Tabler, Trilla.
- 1884, Wm. A. Poorman, Humboldt.
- 1887, Garrett V. Millar, Mattoon.
- 1891, Chauncey R. Doty, Charleston.

COOK COUNTY—

- 1879, George Struckman, Bartlett.
- 1879, C. L. Sweet, Glenwood.
- 1879, Edwin M. Powell, Orland.
- 1880, Elbert Wheeler, Arlington Heights.

CRAWFORD COUNTY—

- 1877, William L. Heustis, Robinson.
- 1877, Andrew Newlin, Hutsonville.
- 1880, J. P. Weger, Flat Rock.
- 1882, William Wood, Oblong.
- 1884, H. H. Haskett, Palestine.

CUMBERLAND COUNTY—

- 1877, David Neal, Neoga.
- 1882, Jas. M. Albin, Neoga.
- 1887, David B. Green, Toledo.
- 1891, J. L. Mattoon, Greenup.

DEKALB COUNTY—

- 1881, Edwin Waite, Sycamore.
- 1884, Robt. Hampton, East Paw Paw.
- 1890, John King, Courtland.

DEWITT COUNTY—

- 1877, E. H. Robb, Waynesville.
- 1882, W. R. Carle, Wapella.

DOUGLAS COUNTY—

- 1879, F. A. McCarty, Filson.
- 1887, William Iles, Camargo.
- 1891, W. C. Campbell, Murdock.
- 1891, J. F. Bouck, Arcola.
- 1891, William Howe, Ficklin.

DUPAGE COUNTY—

- 1877, P. W. Stacy, Prospect Park.
- 1885, Thomas Betts, Jr., Naperville.
- 1888, A. D. Albrow, Wayne.
- 1891, Sherman Kelley, Wheaton.

EDGAR COUNTY—

Chicago Scale Co.'s U. S. STANDARD SCALES

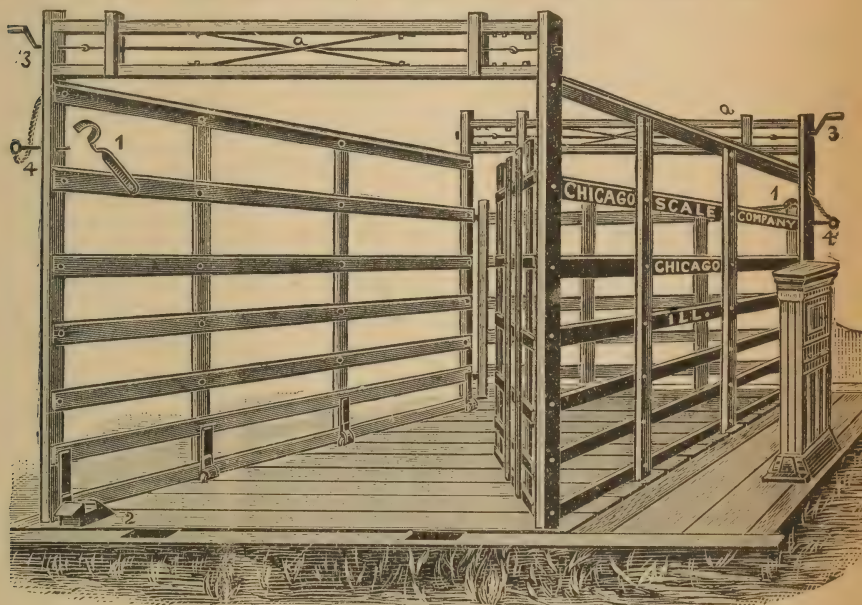

—THE BEST IN USE FOR—

Hay, Grain, Stock, Coal, Cotton or Merchandise,
THE MOST POPULAR SCALES AMONG FARMERS.

Simple in construction, so that any one can set them up or regulate them. Require least Pit than any other Scale. Made throughout of the best material. The bearing upon which all the wear comes are the best quality of English Steel, made in Sheffield England; expressly for our use. The Beams are Brass and the Levers and all the hanging arrangements are of the strongest and toughest Iron.

The immense numbers sold, enable us to furnish as good a Scale as can be made at the prices of cheap ones, and far below the prices of old Concerns, who are obliged to get four times the cost of their Goods, in order to pay their enormous expenses.

BUY THE "CHICAGO," WHICH IS FULLY WARRANTED.

BOULTON'S "PATENT" ROYAL SCALE RACK

- | | |
|--|----------------------------------|
| 2 Ton Wagon Scale, (Platform 6x12), \$40.00. | 3 Ton, (Platform 7x13), \$50.00. |
| 4 Ton, (Platform 8x14), \$60.00. | 5 Ton, (Platform 8x14), \$75.00. |
| 6 Ton, (Platform 8x16), \$90.00. | 6 Ton, (Platform 8x22) \$110.00. |

All other Sizes in Proportion. Beam Box Neatly Painted and Lettered Sent with Each Scale.
We Manufacture all Variety of Scales.

ROYAL SCALE RACKS furnished complete or the Irons with full directions for Building.

At our Low Prices no Farmer can afford to be without a Wagon Scale, on which he can weigh all his Produce and Stock, saving in convenience and shrinkage more than the cost every year. Of the Tens of Thousands in use for the last twenty-five years they have given universal satisfaction, notwithstanding the efforts of our opponents to convince men of common sense, that Steel, Iron and Brass were "Wool Pewter and Pot Metal."

 All Orders Promptly Filled. Send for List of 1000 other articles sold at our half usual prices.

Address,

CHICAGO SCALE CO. Chicago

WORKING DAIRY.

Below will be found a report from Prof. E. H. Farrington, Chemist of the Agricultural Experiment Station, University of Illinois, at Champaign, Ill., upon the results of the Working Dairy, in operation at the late Dairy Show:

CHAMPAIGN, ILL., Jan. 21, 1892.

Mr. A. B. Hostetter, Superintendent Dairy Department American Dairy Show, Mt. Carroll, Ill.:

DEAR SIR—I send you enclosed a report of the work which I did at the American Dairy Show, Chicago, November, 1891, of which you are Superintendent.

The milk given at one milking at 2:30 P. M., November 18th, by the two Brown Swiss cows, tested at the Dairy Show in Chicago, was taken for churning. The milk weighed 52 pounds, and by test contained 1.971 pounds butter fat, as follows:

Cow Eliza.	23 lbs. milk, test, 3.4 per cent.	9.782 lbs. butter fat.
Cow Brienzen.	29 " " " 4.1 " " "	1.189 " "
Total.....	52.....	1.971 " "

This milk was run through a "Baby" Hand Separator No. 2. Several samples of the skim milk were taken as it came from the separator, which showed only traces of butter fat. The cream from the separator weighed 10½ pounds, or 19.7 per cent of the new milk. From the test of the new milk, a simple calculation shows the cream contained 19.23 per cent. butter fat, assuming that none was lost in the skim milk. The cream was ripened for about 24 hours and then churned. The details of the results are given in the table.

During the progress of the Dairy Show, a working dairy was in operation. For this 30 cans of milk were received on Wednesday, November 18th. This milk weighed 2,035½ pounds. It was put in a large vat, warmed and thoroughly mixed. The thoroughness of the mixing is illustrated by the fact that tests of four samples showed no variation in the per cent. of butter fat. One sample was taken from the middle of the vat, two from the ends, one from the first milk drawn from the faucet. The milk contained 4.15 per cent. of butter fat or 84.45 pounds in the 2,035.25 pounds of milk.

This milk was run through a separator in 65 minutes. The speed of the separator was said to be 6,000 revolutions per minute. Traces only of butter fat were found in four samples of the skim milk taken during the process of separation. It required 9.8 c. c. of one-tenth normal alkali to make 50 c. c. of the milk neutral. After ripening for 24 hours the cream was churned. Details are given in the table.

RESULTS FROM THE CHURNINGS.

	CREAM FROM MILK OF	
	Brown Swiss Cows.	Working Dairy.
Weight of cream churned (lbs.)	10½
Temperature of cream churned (fahr.)	61.	61.
Temperature of buttermilk (fahr.)	59.	61.
Time of churning (minutes)	65.	17.
Acidity of cream [50 c. c. = 1.10 normal alkali]	25.5c.c.	37.
Weight of buttermilk (lbs.)	15.	204.5
Per cent. of fat in buttermilk test	0.6	0.3
Weight of salted butter from churn (lbs.)	2.1875	104.5
Weight of butter fat by test of milk (lbs.)	1.371	84.46
Difference (lbs.)	0.2165	20.04
Percentage increase of churn over test, or of butter over butter fat in the milk	11.5	23.6
ANALYSIS OF BUTTER.		
Water per cent.	15.4	14.15
Butter fat per cent.	77.24	82.
Salt per cent.	6.6	3.
Curd per cent.	0.76	0.85
Total	100.00	100.00
Pounds of butter fat in butter	1.689	85.69
Pounds of butter fat in the butter milk	0.09	0.61
Total	1.779	86.30
Pounds of butter fat in the milk used, as tested	1.971	84.46
Difference—loss or gain in the process.	-0.192	+1.84
Per cent. which loss or gain was of the total butter fat in the milk used.	-9.7	+2.17

The butter obtained from the 52 lbs. of Brown Swiss milk was about 3 oz. more than the butter fat in the same milk, as indicated by the tests of the new milk. The butter obtained from the 2,035.25 lbs. of milk used in the working dairy was 20 lbs. more than the butter fat shown by tests of the milk. This is an increase of the churn over the test of 11.5 and 23.6 per cent. respectively.

It is evident that the sum of the butter fat found in the butter and buttermilk should, theoretically, equal to the butter fat found in the milk from which they are derived, provided none was lost in the skim milk.

Such an account was kept of the Brown Swiss milk and shows a loss of 0.19 lbs. butter fat, or 9.7 per cent. of the total weight of butter fat in the milk started with. Although this is not the finest working that can be done, so small a quantity could easily be lost by adhering to the dairy utensils of processes through which the milk passes to make butter.

A similar account kept with the 2,035.25 lbs. of milk in the working dairy shows an increase of 1.84 lbs. of butter fat over the total quantity in the fresh milk as tested. This "figurative" creation of butter fat in excess of what there was in the milk is probably due to the water that the 13 wooden boxes absorbed after they were weighed. The helper who packed the butter into the boxes from the churn had weighed the dry boxes, then dipped each one into cold water, filled it with butter, and from the total weight subtracted the weight of the dry boxes, so that the water absorbed by the dry boxes appears as weight of butter. The salt added to the butter from the Brown Swiss milk was not weighed, but estimated by the helper and the analysis of the butter shows an excessive quantity.

Very truly yours,

E. H. FARRINGTON,

Chemist Agricultural Experiment Station, University of Illinois.

REPORT

FOR

1887, 1888, 1889, 1890 and 1891

OF THE

State Board of Agriculture,

GIVING THE

USES, VALUES, ETC.

AND

ANALYSES OF FERTILIZERS

Licensed For Sale or Manufactured in Illinois.

W. C. GARRARD, SECRETARY.

SPRINGFIELD.

DEPARTMENT OF AGRICULTURE,

SPRINGFIELD, ILL., May 10, 1892.

In compliance with section 7 of the law entitled "An Act to Prevent Fraud in the Manufacture and Sale of Commercial Fertilizers," Approved June 29, 1885, the following report of analyses of all fertilizers sold and certificates filed in this State, together with a statement of the moneys received for licenses and expended for analyses and printing, for the years 1887, 1888, 1889, 1890, and 1891 is presented. During the year 1887 five samples of fertilizer were submitted for analysis; in 1888, seven; in 1889, three; in 1890, three, and in 1891, six.

While the packing establishments of Chicago manufacture large quantities of fertilizer, thus utilizing much of the otherwise waste material, a comparatively small portion is used in this State, but the loss to the soil from continual cropping must be replaced in some way, and the progressive farmers of Illinois are learning the value of fertilizers other than those produced on the farm.

A copy of the law in regard to commercial fertilizers is included in this report.

FERTILIZERS.

TO PREVENT FRAUD.

| § 4. Analysis of fertilizers. | § 9. Suits, how brought. |
| § 5. Penalties for violating this act. | |

An Act to Prevent Fraud in the Manufacture and Sale of Commercial Fertilizers

SECTION 1. Be it enacted by the People of the State of Illinois, represented in the General Assembly: That any person or company who shall offer, sell, or expose for sale, in this State, any commercial fertilizer, the price of which exceeds ten dollars a ton, shall affix to every package, in a conspicuous place thereon, a plainly printed certificate, stating the number of net pounds in the package sold or offered for sale, the name or trade-mark under which the article is sold, the name of the manufacturer and the place

of manufacture, and a chemical analysis, stating the percentage of nitrogen or its equivalent in ammonia, in an available form, of potash, soluble in water, and of phosphoric acid, in an available form, (soluble or reverted) as well as the total phosphoric acid.

§ 2. Before any commercial fertilizer is sold, or offered for sale, the manufacturer, importer, or party who causes it to be sold, or offered for sale, within the State of Illinois, shall file in the office of the Illinois State Board of Agriculture, a certified copy of the certificate referred to in section 1 of this act, and shall deposit with the secretary of said Board of Agriculture a sealed glass jar, containing not less than one pound of the fertilizer, accompanied with an affidavit that it is a fair average sample.

§ 3. The manufacturer, importer or agent of any commercial fertilizer, exceeding ten dollars per ton in price, shall pay, annually, on or before the first of May, a license fee of twenty dollars for the privilege of selling or offering for sale, within the State, said fee to be paid to the treasurer of the Illinois State Board of Agriculture: *Provided*, that whenever the manufacturer or importer shall have paid the license fee herein required for any person acting as agent for such manufacturer or importer, such agent shall not be required to pay the fee named in this section.

§ 4. All analyses of commercial fertilizers, sold within the State, shall be under the direction of the Illinois State Board of Agriculture, and paid for out of funds arising from license fees, as provided for in section 3. At least one analysis of each fertilizer shall be made annually.

§ 5. Any person or party who shall offer or expose for sale any commercial fertilizer without complying with the provisions of sections 1, 2 and 3 of this act, or shall permit an analysis to be attached to any package of such fertilizer, stating that it contains a larger percentage of any one or more of the constituents, named in section one of this act, than it really does contain, shall be fined not less than two hundred dollars for the first offense, and not less than five hundred dollars for every subsequent offense; and the offender, in all cases, shall also be liable for damages sustained by the purchaser of such fertilizer. *Provided, however*, that a deficiency of one per cent. of the nitrogen, potash or phosphoric acid claimed to be contained, shall not be considered as evidence of fraudulent intent.

§ 6. Suit may be brought for the recovery of fines or damages, under the provisions of this act, in the county where the fertilizer was for sale, or where it was manufactured; and all fines, so recovered, shall be paid into the treasury of the State Board of Agriculture by the court collecting the same. The treasurer of the State Board of Agriculture, after the payment of expenses for analyses, and the publication of the annual report relating to the analyses, use and results obtained from fertilizers, shall pay into the treasury of the State any surplus remaining in his hands on account of license fees and fines received through the provisions of this act.

§ 7. The Illinois State Board of Agriculture shall publish annually, a correct report of analyses made and certificates filed, together with a statement of moneys received on account of license fees and fines, and expended for analyses and publication of the report relating to fertilizers.

§ 8. The officers and members of the Illinois State Board of Agriculture, or any person authorized by said Board, is hereby empowered to select from any package of commercial fertilizers exposed for sale in any county of Illinois, a quantity not exceeding two pounds, which quantity shall be for analysis to compare with sample deposited with the secretary of said Board of Agriculture, as provided for in section 2 of this act, and with the printed certificate found on the given package found on sale.

§ 9. All suits for the recovery of fines, under the provisions of this act, shall be brought by the Attorney General of the State, in the name of the people of the State of Illinois.

19th District—B. PULLEN, Centralia.

20th District—J. M. WASHBURN, Marion.

INTRODUCTORY.

This report is compiled from the application filed for State certificates under the "Act to protect stock breeders within the State of Illinois," during the year 1891. There were issued one hundred and sixty-eight certificates during the past year.

The pedigrees contained herein have been verified as far as practicable, by the various stud books of recognized live stock associations of America, England, Scotland and France.

No doubt inaccuracies will be found, owing to the indifferent, if not the entire, want of method in preserving the pedigrees of stock, adopted by many breeders and importers. Where it was possible to correct them before the certificates were issued, it has been done.

Again the attention of owners and breeders of live stock in this State is called to the necessity of having their animals properly and promptly recorded in the herd and stud books of the country.

During the past year there has been a most remarkable improvement in the class of draft, trotting, pacing and coach sires, in service in the State, and it is hoped that more attention will be given to the recording of the pedigrees of their progeny than before. A copy of the law relative to false pedigrees is given in this report, that breeders and importers may fully understand its provisions and appreciate the penalties imposed.

Blanks pertaining to the "Act to protect live stock breeders within the State of Illinois" will be cheerfully furnished on application.

W. C. GARRARD,
Secretary State Board of Agriculture.

APPLICATION FOR CERTIFICATE.

189

*To the Secretary of the State Board of Agriculture,
Springfield, Ill.*

SIR: A State Certificate is desired for the following described sire, which you are respectfully requested to issue as provided in the law entitled "An act to protect stock breeders within the State of Illinois."

Enclosed you will find postoffice (or express) money order for two dollars, to cover the expense of making out the certificate to be sent to the County Clerk, the certificate to be posted as prescribed by law, at the station at which the sire is making the season of 189 , and the third copy for the undersigned.

An Act to Protect Stockbreeders within the State of Illinois. In force July 1, 1889.

SECTION 1. *Be it enacted by the People of the State of Illinois, represented in the General Assembly,* That in order to protect farmers in this State against damage resulting from breeding to sires advertised with bogus or fraudulent pedigrees, and to secure to the owners of sires payment for services, the following provisions are enacted: That every owner of a sire charging a service fee, in order to have a lien upon the get of any such sire under the provisions of this act for said service, shall file a statement, verified by oath or affirmation to the best of his knowledge and belief, with the Secretary of the State Board of Agriculture, giving the name, age, description and pedigree, as well as the terms and conditions upon which such sire is advertised for service.

§ 2. The Secretary of the State Board of Agriculture, upon receipt of the statement as specified in section one (1) of this act, duly verified by affidavit, shall issue a certificate to the owner of said sire, a copy of which certificate shall be forwarded to the clerk of the county court in which said sire is stationed or located, and another copy furnished the applicant, which shall be posted by the owner in a conspicuous place where said sire may be stationed, which certificate shall state the name, age, description, pedigree and ownership of said sire, the terms and conditions upon which the sire is advertised for service, and that the provisions of this act, so far as relates to the filing of the statement aforesaid, have been complied with.

§ 3. The owner or owners of any sire receiving such certificate, by complying with section one (1) of this act, shall obtain and have a lien upon the get of any such sire for the period of six months from the date of birth of get: *Provided*, said owner or owners shall, within twelve months of the time of rendition of such service by such certified sire, file for record a statement of account, verified by affidavit or affirmation, with the recorder of the county wherein the service has been rendered, of the amount due such owner or owners for said service, together with a description of the female served.

§ 4. No get of any such sire shall be exempt from levy and sale under execution issued upon a judgment, obtained in any court of competent jurisdiction for said service: *Provided*, that the court rendering such judgment shall find and certify, in the record of the same, that the plaintiff or plaintiffs have complied with the provisions of this act, and that the progeny sought to be levied upon is subject to the lien created. *And provided further*, that said finding, together with a description of the dam of the progeny so liable to such lien, shall be endorsed upon the execution.

§ 5. For filing certificates, making copy of such affidavit or affirmation the certificate of the date of such filing, the clerk or recorder shall be entitled to the same fees as are provided by law for like service in regard to chattel mortgage.

§ 6. The Illinois State Board of Agriculture is authorized to make a charge for such certificate—not to exceed two dollars (\$2)—as may be necessary to cover the expense incident to executing the provisions of this act.

§ 7. The Commissioners of State Contracts shall have such a number of the annual reports printed and bound in third-class binding as may be deemed advisable by the State Board of Agriculture, to obtain the greatest benefits to the breeders of improved stock in this State, under the provisions of this act, said reports to contain copies of the certificates issued, and such other data of especial interest to live stock breeders as said Board of Agriculture may designate for publication therein.

Approved June 10, 1887; amended June 1, 1889.

FORM OF CERTIFICATE

PEDIGREES.

BELOW WILL BE FOUND THE LAW RELATIVE TO
FRAUDULENT PEDIGREES.

§ 1. Provides penalties for obtaining certificate of registration upon false pretenses.

An act to punish false pretenses in obtaining certificates of registration of cattle and other animals, and to punish giving false pedigrees.

SECTION 1. *Be it enacted by the People of the State of Illinois, represented in the General Assembly:* That any person, who by any false pretense, shall obtain from any club, association, society or company for improving the breed of cattle, horses, sheep, swine or other domestic animals, a certificate of registration of any animal in the herd register, or other register of any such club, association, society or company, or a transfer of any such registration, and every person who shall knowingly give a false pedigree of any animal, upon conviction thereof shall be fined not exceeding \$1,000 nor less than \$25, or imprisonment in the county jail for a period not exceeding one year, or both, in the discretion of the court.

Approved May 13, 1887.

LIST OF SIRE.

Certificate No. 568.

FRANCOIS.
